

2014 SHELF Survey: Bitter Crab – Kodiak-Pathobiology

The goal is to collect 200 frozen crab samples (legs) within each index site. There are 3 index sites assigned to *Chionoecetes opilio*, and 3 to *C. bairdi*. Within each index site, there are 10 stations (see below & index station map). Collect 20 legs of the specified species at designated stations. If you cannot collect 20 at a station, make up the difference at the next station w/in the index site.

1. Refer to BCS Index Site and Station map. When on a station, randomly sample crabs regardless of sex. See below and the index station map for *C. opilio* and *C. bairdi* maximum target sizes. It is *very* important to obtain 20 crabs/station! Crab leads: please keep in touch with each other to ensure that the 200 crab collection goals are met at each index site.
2. Crabs should be chosen at random during measuring. As the “crab measurer”, pick out a crab and alert the “data entry person” that this crab will be used for BCS project. Then request a crab number, which will be the data entry Record Number from the database. Grab a bag from the “patho bag bundle”, on the pre-printed label write the Record Number in the SAP Crab No. line, as well as the haul number (see tag example below). Remove a leg: either break off an entire leg (claws are OK) or use scissor to cut (we need at least 1” length of muscle). Drop used scissors in beaker of fresh water (don’t let blood/tissue dry on scissors). For small (<30mm) crabs, collect multiple legs, or freeze whole crab. Place leg inside bag with label on the inside facing out.
3. At the end of the haul, collect all 20 crab leg bags and place inside a larger bag. Write the haul number on a pre-printed label and place the label on the inside of the haul bag facing out. Put bags in freezer inside a freezer box. Rinse off all used scissors in fresh water to avoid contaminating following crab.

If both biologists stay on deck at an index station, or if time is an issue, whole crabs can be collected: write haul number on tag, bag whole crab, and freeze. Important: if freezing whole crab, no crab information is needed on the tag except for haul number (vessel number is already preprinted).

4. Blood Smears: Please make a blood smear & frozen tissue (leg) from any visually positive BCS **King Crab**:
 - In pencil, write the vessel no., haul no. & “KC” on the white frosted end of a new microscope slide.
 - Dry (with paper towel) & snip off the dactyl tip using clean scissors. Drip 1-2 drops (approx. 4 mm dia.) of blood near the edge of the *non*-frosted end of the microscope slide.
 - Take a “smearing” slide, place it at a 30°-45° angle, place it so it touches the inner edge of the drop of blood and then drag the smearing slide toward the frosted end of the slide with a smooth and steady motion. Drag blood, don’t push it (see figure below). Used “smearing” slides can be disposed of in a container labeled “Used Smearing Slides”. Set smears aside and allow to dry, try to avoid all water splash while making smears on deck!
 - Place leg inside a plastic bag and write crab information on a pre-printed King Crab label: vessel, haul, species, carapace length, sex, and shell condition.
 - Rinse off scissors in fresh water before using on next crab to avoid contamination.
 - After the slides are completely dry, place in a black slide box. Please keep black slide box in dry location.
5. At the end of LEG 2 & 3, combine frozen crab from both boats and ship freezer boxes to Seattle using Coastal Transportation. Bill of Lading info: Christie Lang, 7600 Sand Point Way NE, Seattle WA, 206-526-6715. Please email christie.lang@noaa.gov with shipping information: Vessel name, Voyage number, Number of freezer boxes.

Females ≤ 85 mm

Collect 20 crab / station

2014 EBS Shelf – *Hematodinium* Project

Frozen sample processing:

-At Sea: Whole animal or legs were placed in individual bags. Tags were added to each bag which indicated vessel and haul, and sometimes additional information: crab morphometrics or database reference number. Individual bags were grouped into one larger “haul” bag, with another tag that indicated vessel, haul number and sample total. All bags were put in freezer.

-Frozen crabs were shipped via Coastal Transportation from Dutch Harbor to Seattle, arriving Seattle 8/25/14. There were a total of 5 freezer boxes.

-In Lab: Each freezer box was opened for sample inventory on 9/9/14. Spreadsheets and data sheets were created based off of frozen inventory.

PROCESSING of FROZEN SAMPLES (beginning on 9/16/14):

-One or more haul bags were brought from -20°C freezer to HistoLab freezer. Samples were kept in HistoLab freezer and processed one at a time.

-Frozen sample was laid in new weigh dish. Reference numbers, if any, were documented on data sheet. If whole animal sample, morphometrics (sex, size, shell condition, clutch) were taken and documented on data sheet. Using a new razor blade and clean disposable forceps, leg muscle was removed and added into a 2.0 mL microtube and a striptube well, both prefilled with 100% ethanol. Remaining frozen sample was discarded, as well as weigh dish and razor blade. Forceps were wiped with paper towel to remove tissue, then placed in a soapy water dish. After completion of eight samples, all forceps were rinsed and moved into a tub of bleach and soap water for approx. one hour. Forceps were scrubbed with brush, rinsed with tap water and then distilled water.

Processing time: Approximately 1 hour for 8 crabs (includes time for cleaning, labeling tubes, filling tubes with ethanol, etc). The average number of crabs processed per day was 38.

Frozen Crab Processing per Boat/ per Haul

Control wells: SPNO's NOT assigned: 20, 39, 62, 74

Will Need:

- Calipers
- Gloves
- Razor blades
- Forceps
- Weigh/petri dishes
- Radio
- Sharp container
- Ethanol
- Beaker
- Transfer pipette
- Soapy water
- Bleach water
- Clutch guide
- Microtubes
- Microtube caps
- Striptubes
- Striptube caps
- 80-place rack
- DNA Extraction box
- Sterile tips
- Data sheets
- Pencil
- Sharpie
- Labels

Put STERILE TIP in CONTROL WELLS!

See back ↑

Hand 214 had 34 crabs instead of 31

Since hand 215 has only 6 crabs, I moved them to
the end of the sampling

Crabs in hand 27 will move up as well

(4) = leg only

Frozen into Ethanol: Microtube & DNA X
