

829 GO terms clustered by 'binary_cut'

dna transcription
 biosynthetic metabolic negative positive rna
process regulation catabolic

signal negative
 cell response positive mediated receptor
regulation signaling pathway

filament positive microtubule maintenance
 assembly disassembly complex actin
regulation organization

establishment ion positive
 localization cell hormone negative
regulation transport secretion

epithelial tissue involved
regulation cell differentiation muscle renal development morphogenesis

activated population stem precursor neural epithelial
proliferation cell regulation negative

microtubule activity region dna chromatin catalytic
regulation binding positive plusend

acid tissue process homeostatic
homeostasis cell regulation ion cellular amino

granulocyte butyrate
 copper thyroid hormone substance arseniccontaining
response macrophage colonystimulating

phase positive mitotic meiotic arrest process
cycle cell transition regulation
