

222 GO terms clustered by 'binary_cut'

- nucleosidetriphosphatase
atpase tyrosine enzyme gtpase exchange
activity regulator activator kinase
- binding ubiquitin snare cadherin
- ganglioside premrna rna cyclic compound heterocyclic
binding translation activity regulator
- binding mitogenactivated kinase ubiquitinlike ligase
- adenylyltransferase hydrolase
methyltransferase deacetylase oxidoreductase
activity histone kinase acetyltransferase acting
- cationproton
channel antiporter intracellular transfer cation chloride
activity transmembrane transporter
- hormone
transcription serinethreonine kinase adrenergic steroid
binding receptor tumor necrosis
- binding magnesium ion monocarboxylic acid aspartate
- adaptor activity cargo clathrin
- binding gammatubulin myosin heavy chain
- binding growth interleukin fibroblast insulinlike
- receptor activity interleukin neuregulin
- activity
structural muscle constituent molecule elasticity conferring
- binding domain motif ffat zinc finger
- calciumdependent
phosphatidylcholine phosphatidylserine phospholipid
binding phosphatidylinositoltrisphosphate
- ubiquitin acetylationdependent lysineacetylated
polyubiquitin klinked ubiquitindependent ubiquitinationlike
binding modificationdependent histone
- polymerase complex
binding transcription machinery basal rna
- binding mutsalphacomplex ribosome
- sequence binding nuclear localization signal
