

# Enriched Biological Process: ion transmembrane transport

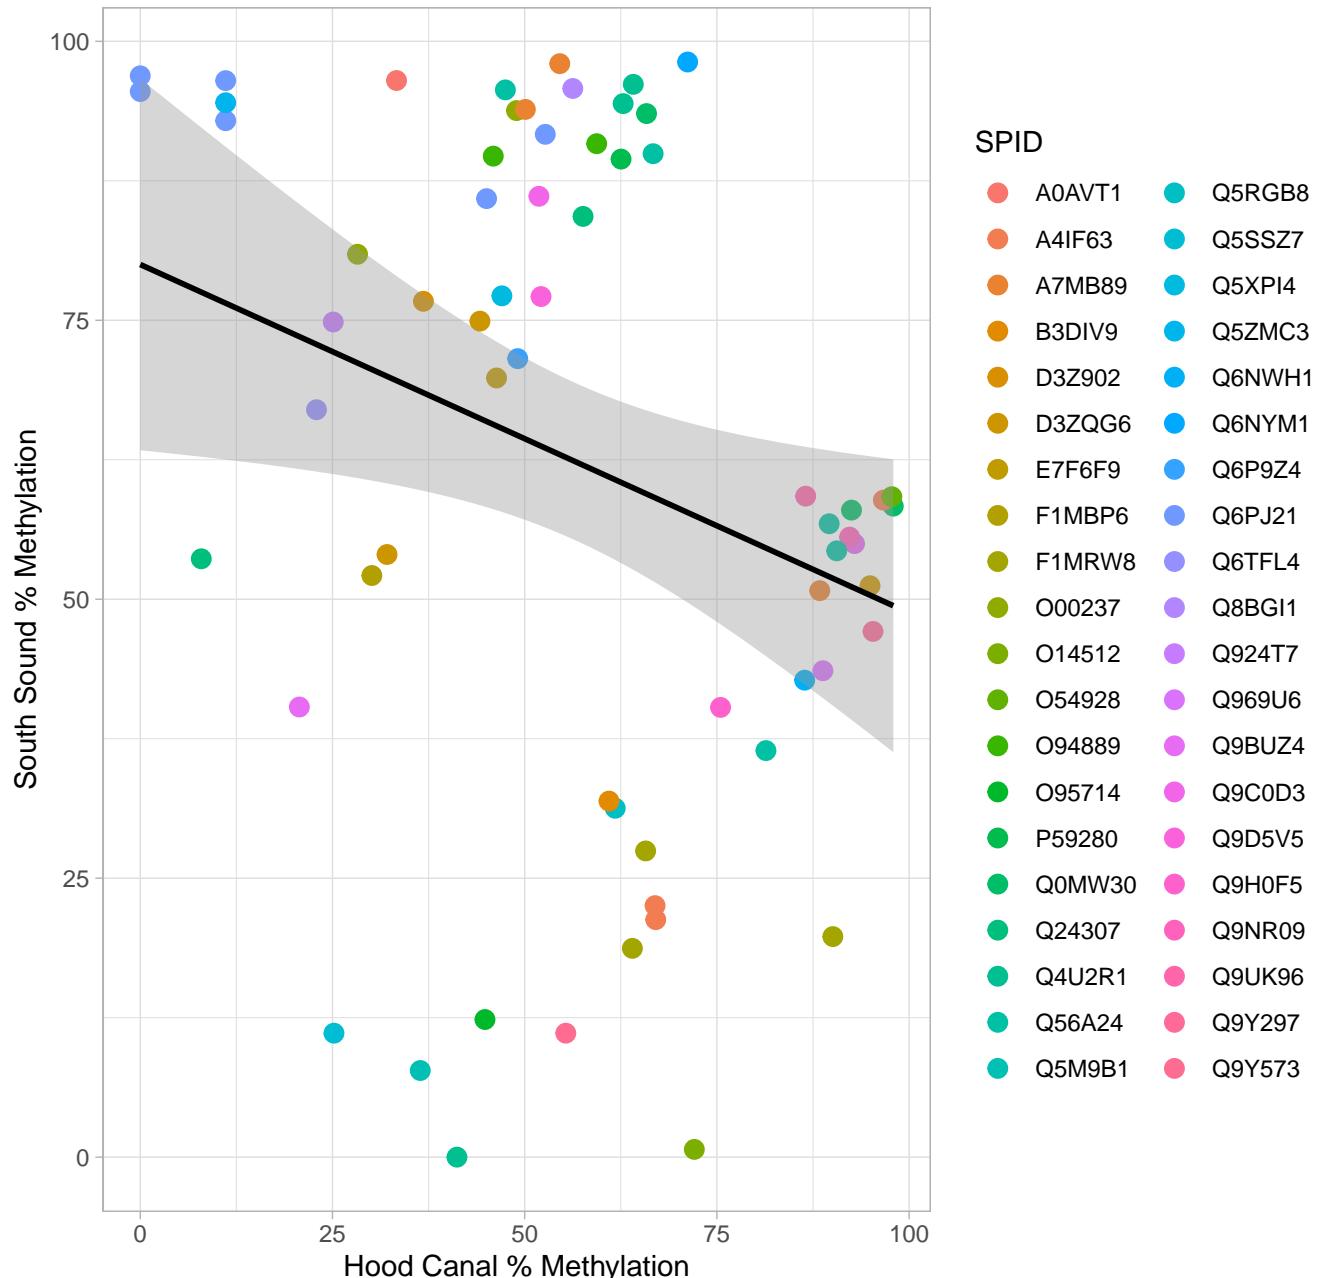

# Enriched Biological Process: homophilic cell adhesion via plasma membrane adhesion molecules

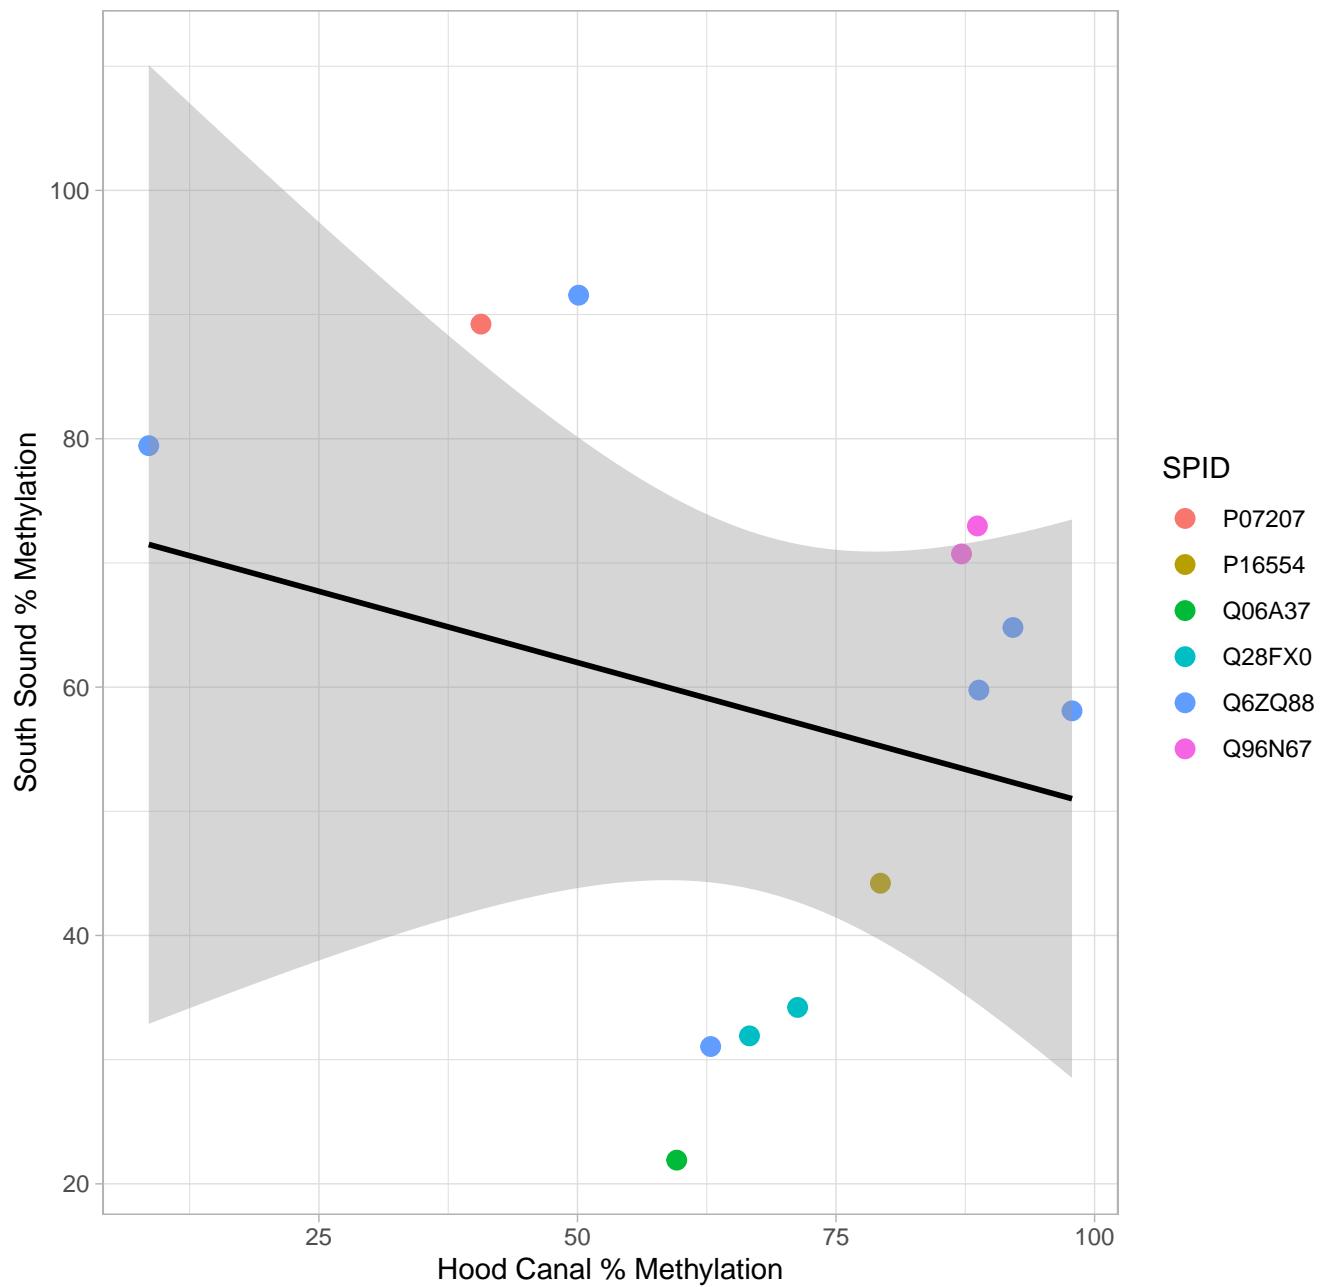

## Enriched Biological Process: protein ubiquitination involved in ubiquitin-dependent protein catabolic proc

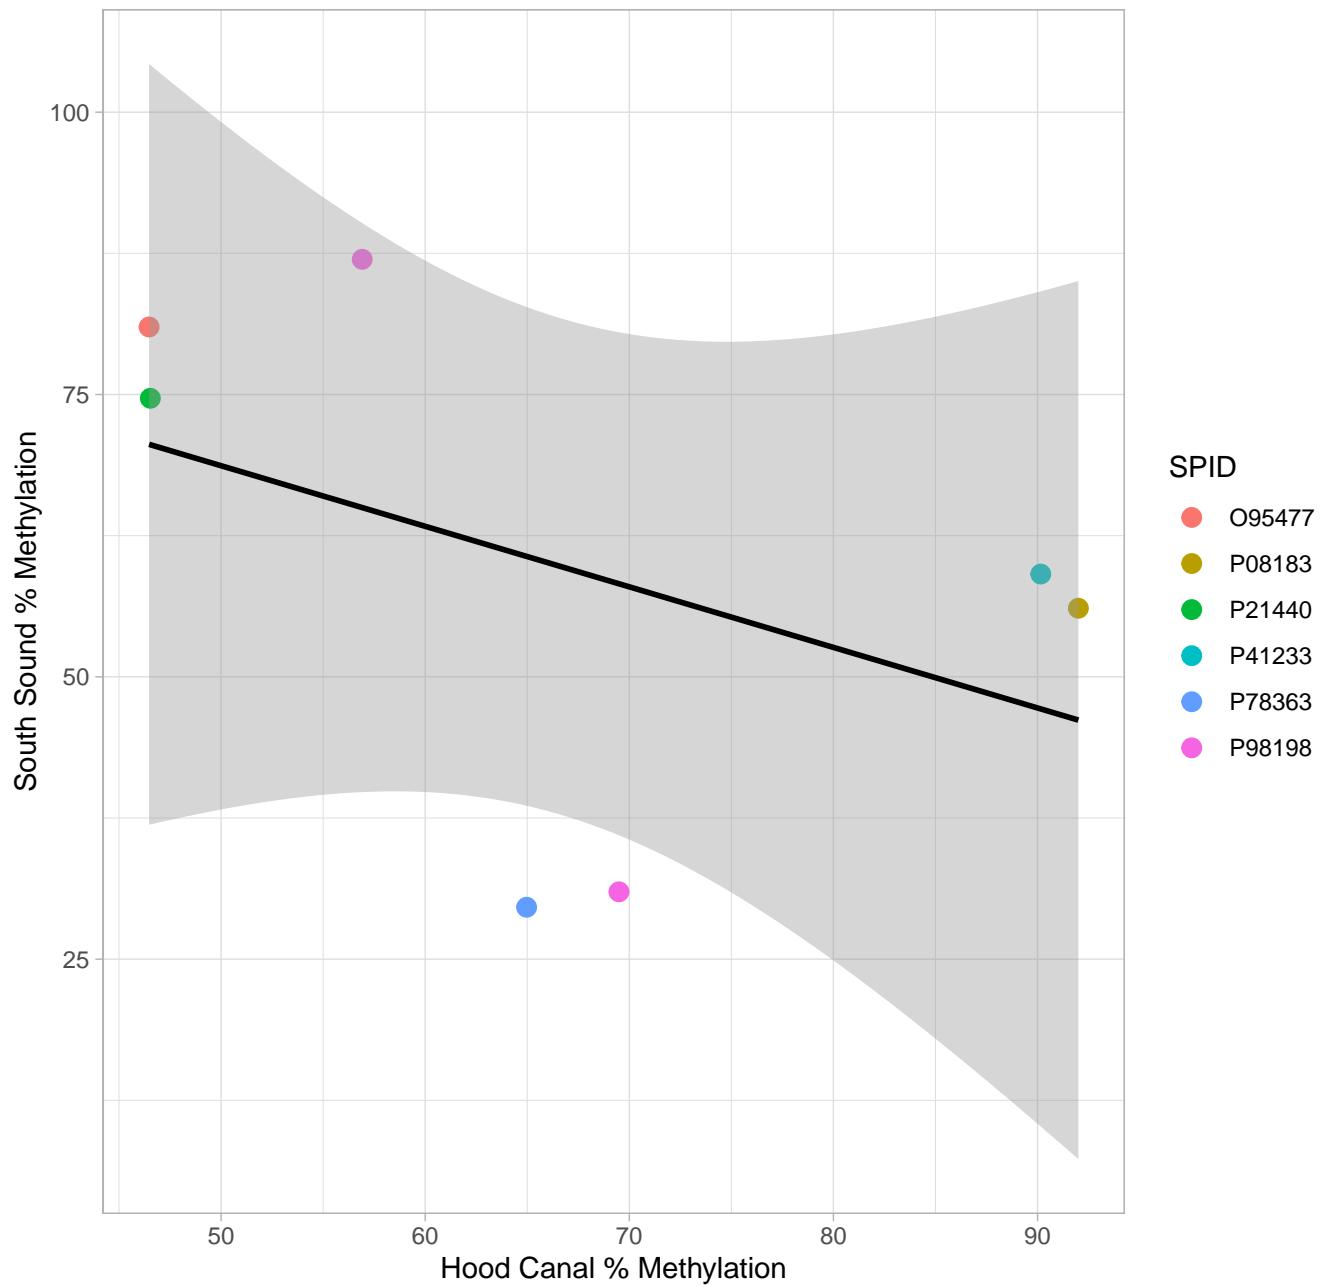

# Enriched Biological Process: protein ubiquitination

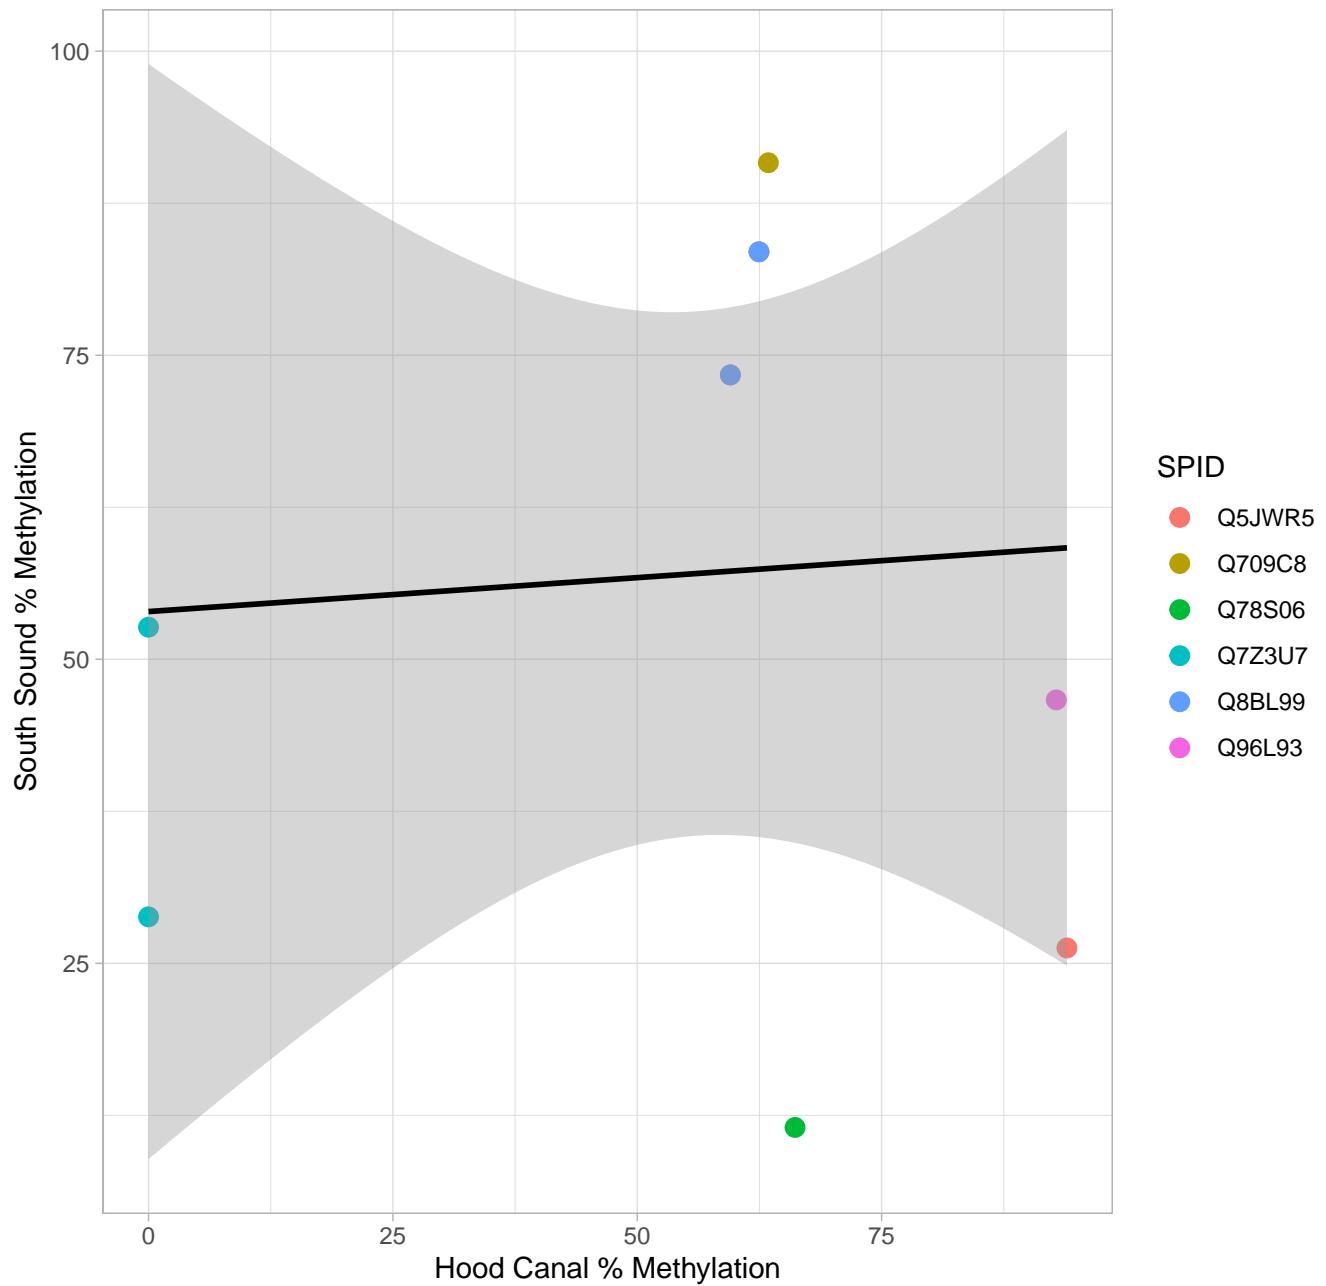

# Enriched Biological Process: regulation of neurogenesis

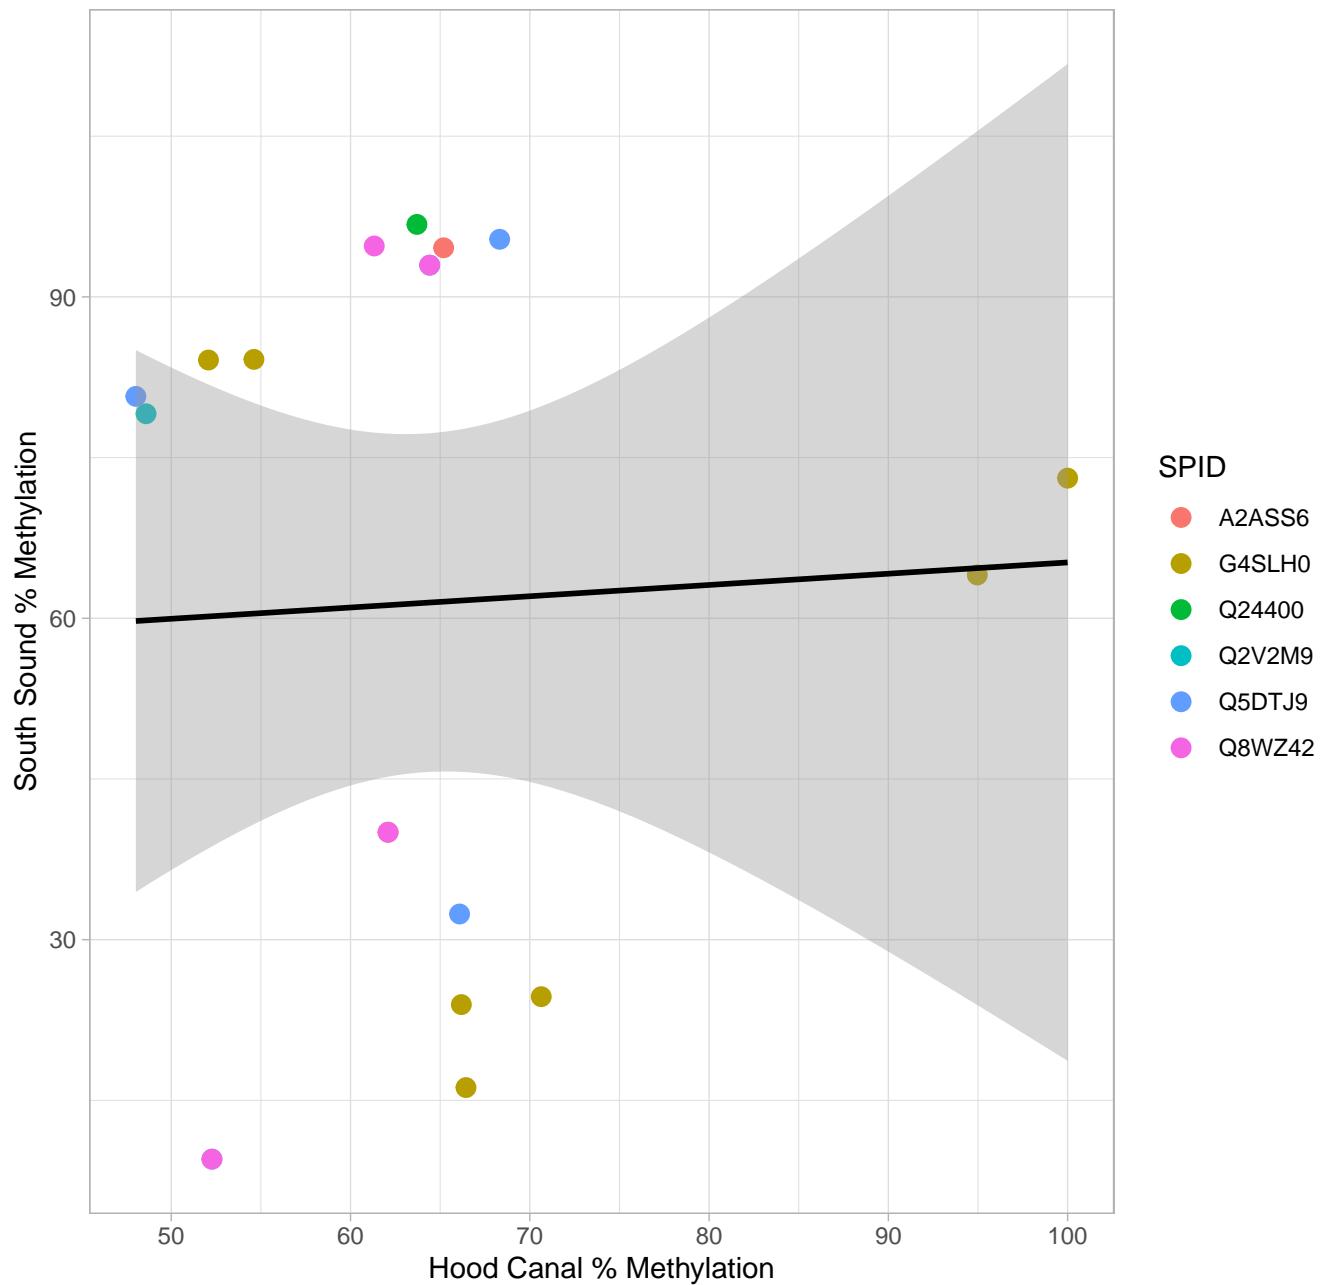

### Enriched Biological Process: phospholipid translocation

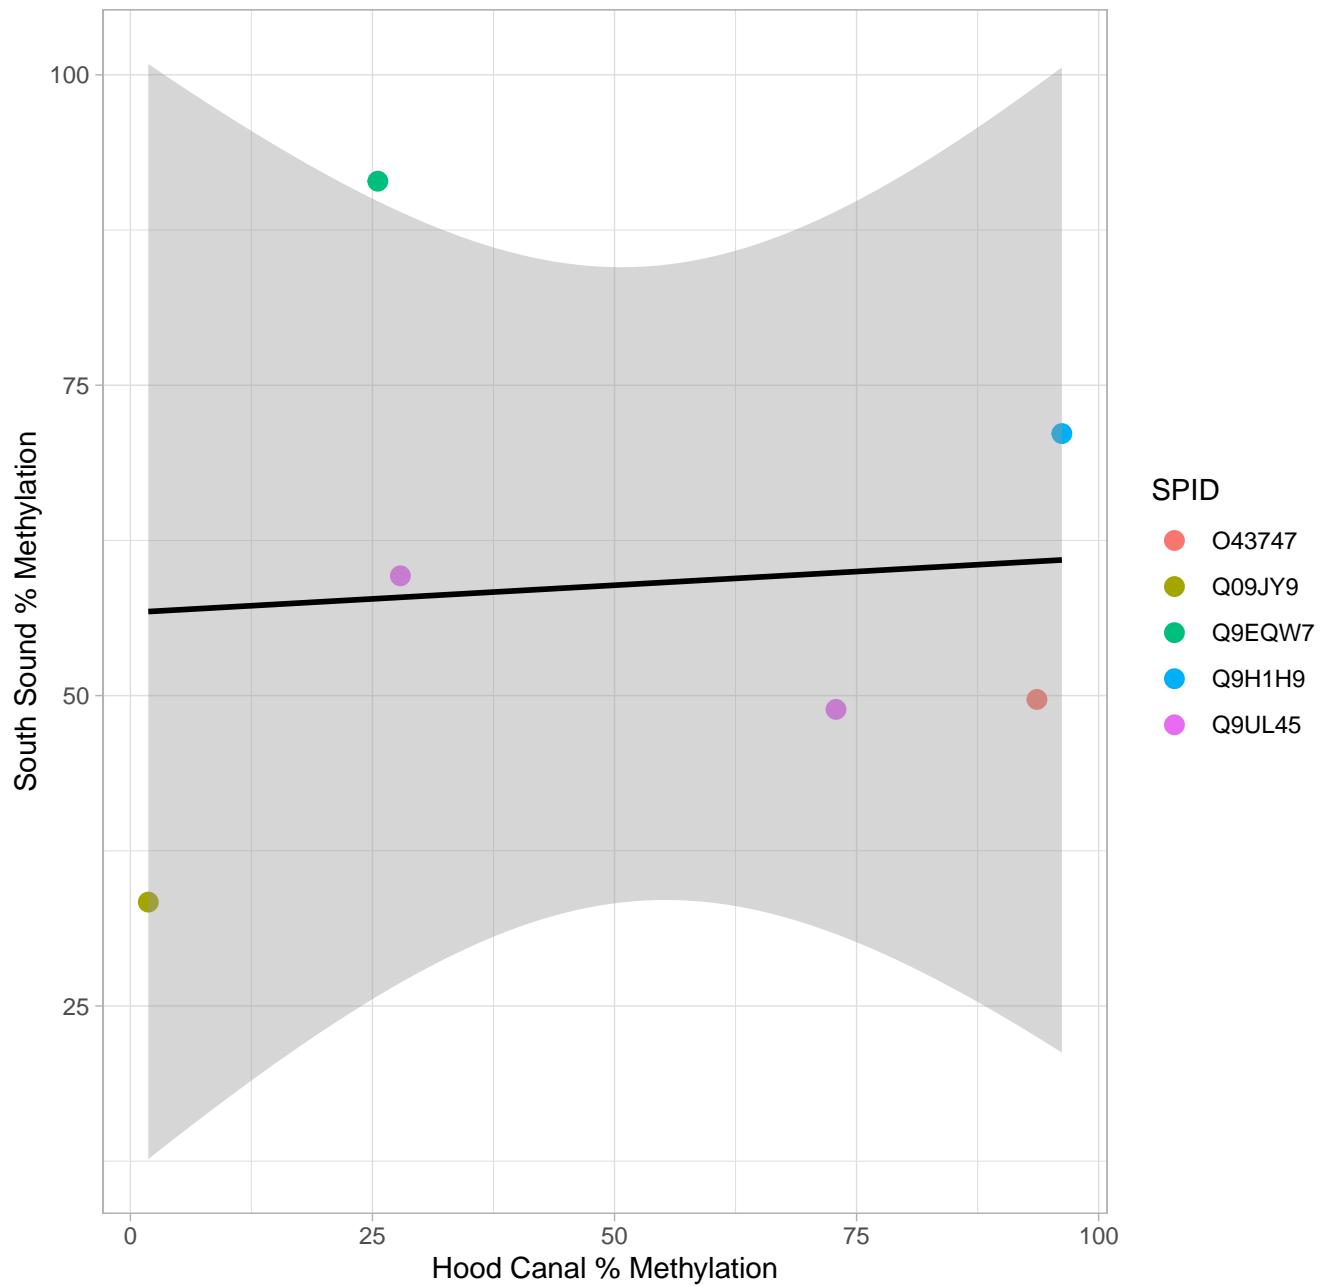

### Enriched Biological Process: Golgi to endosome transport

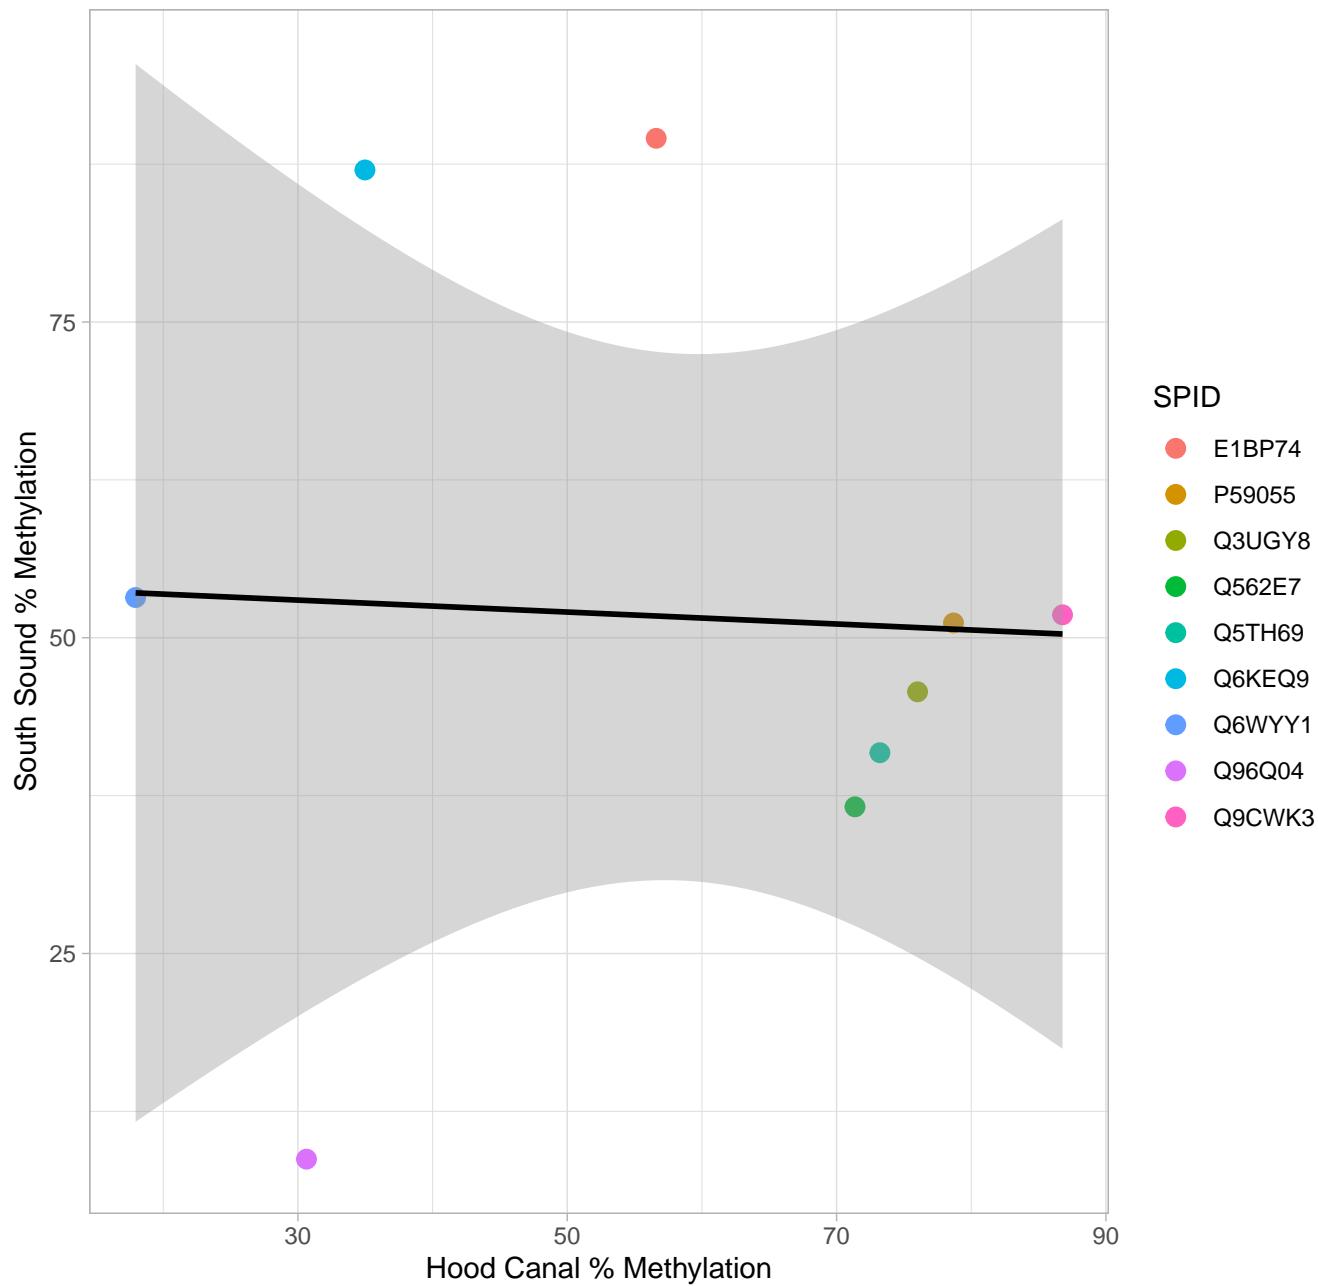

# Enriched Biological Process: sarcomere organization

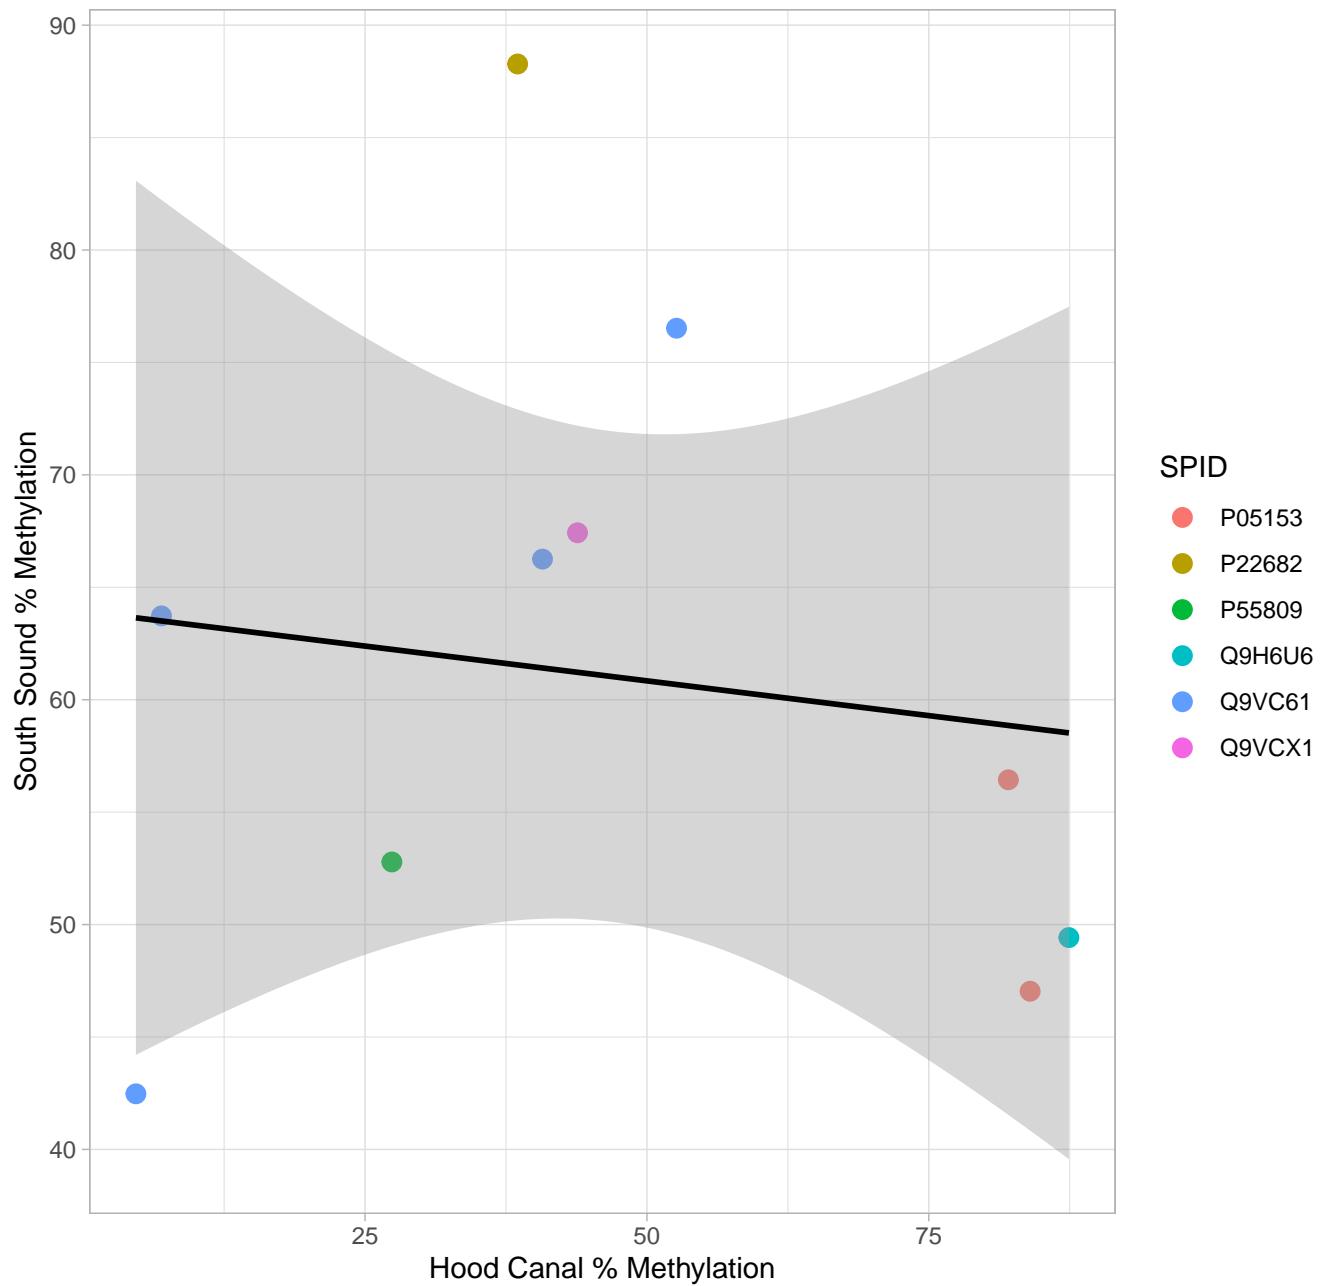

# Enriched Biological Process: melanosome organization

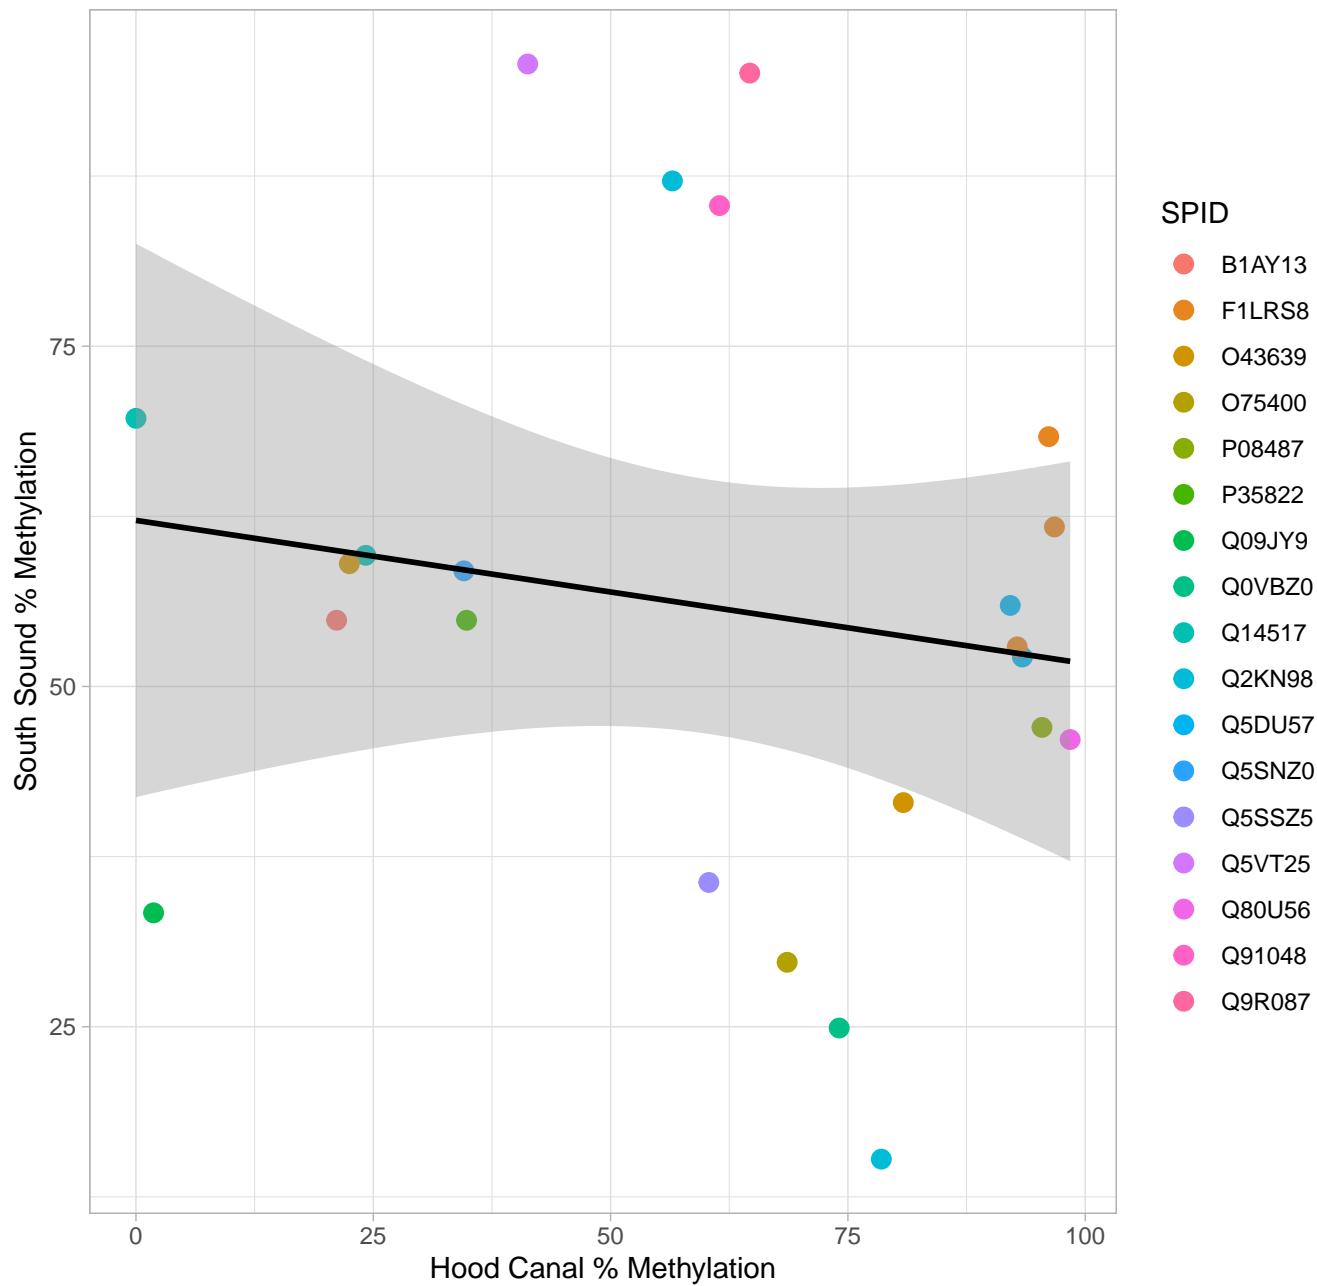

# Enriched Biological Process: negative regulation of phosphatase activity

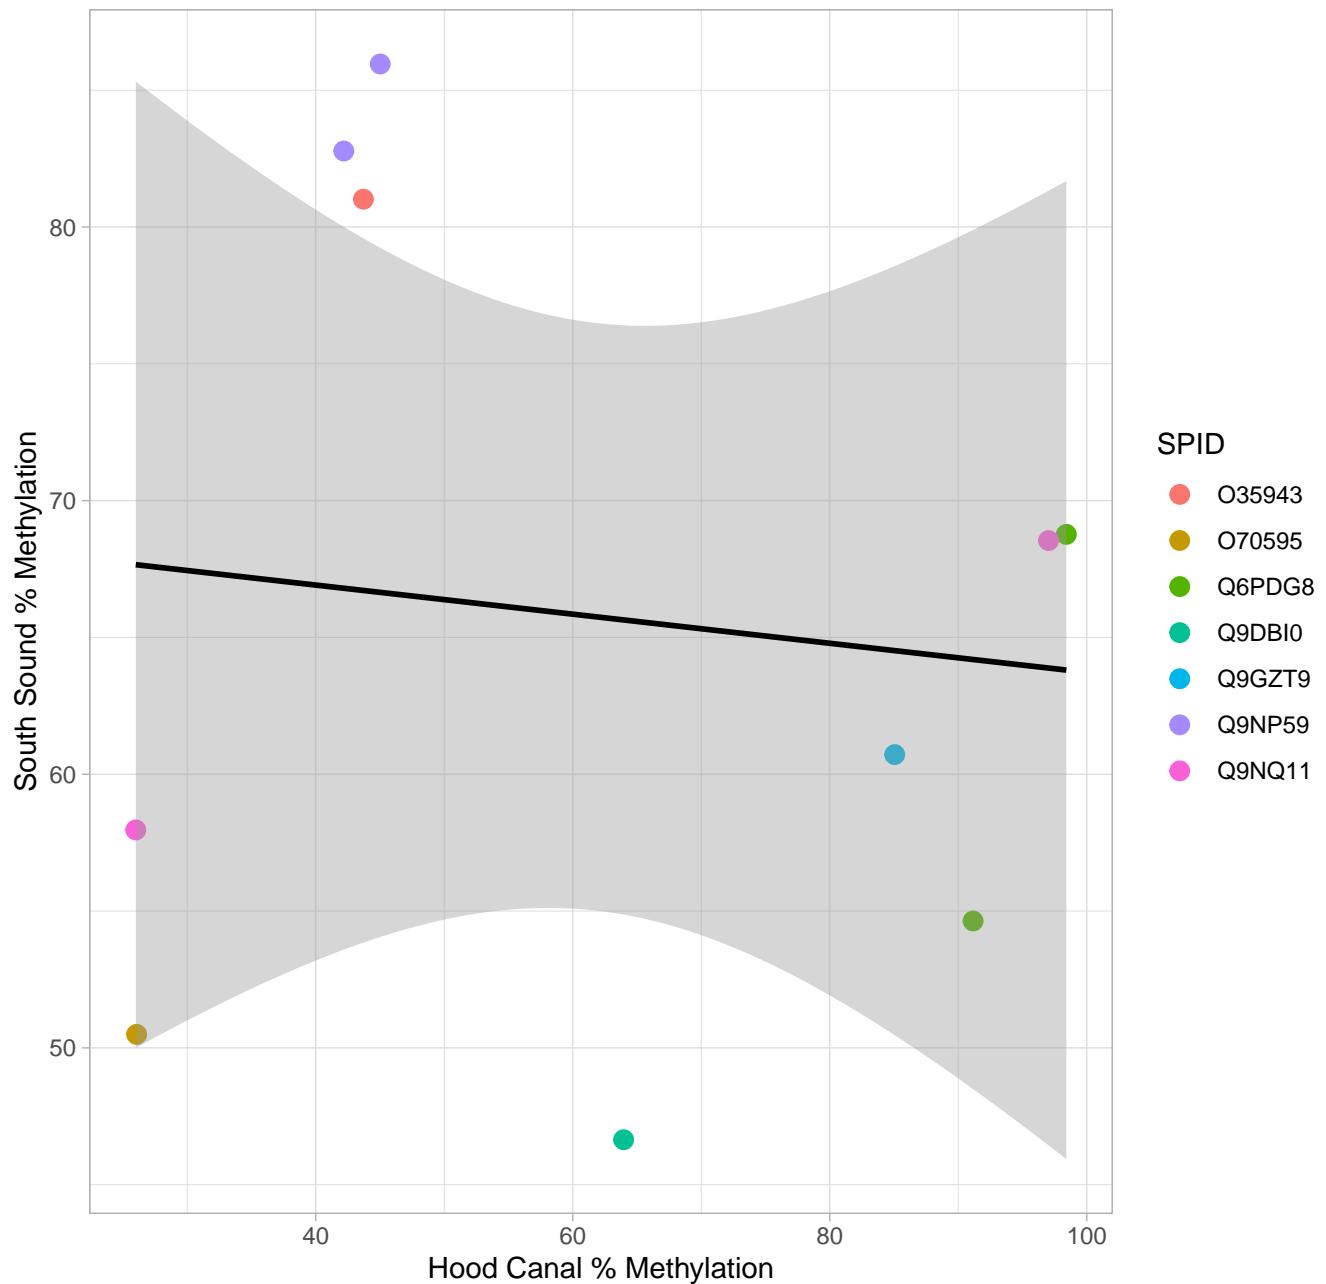

# Enriched Biological Process: response to starvation

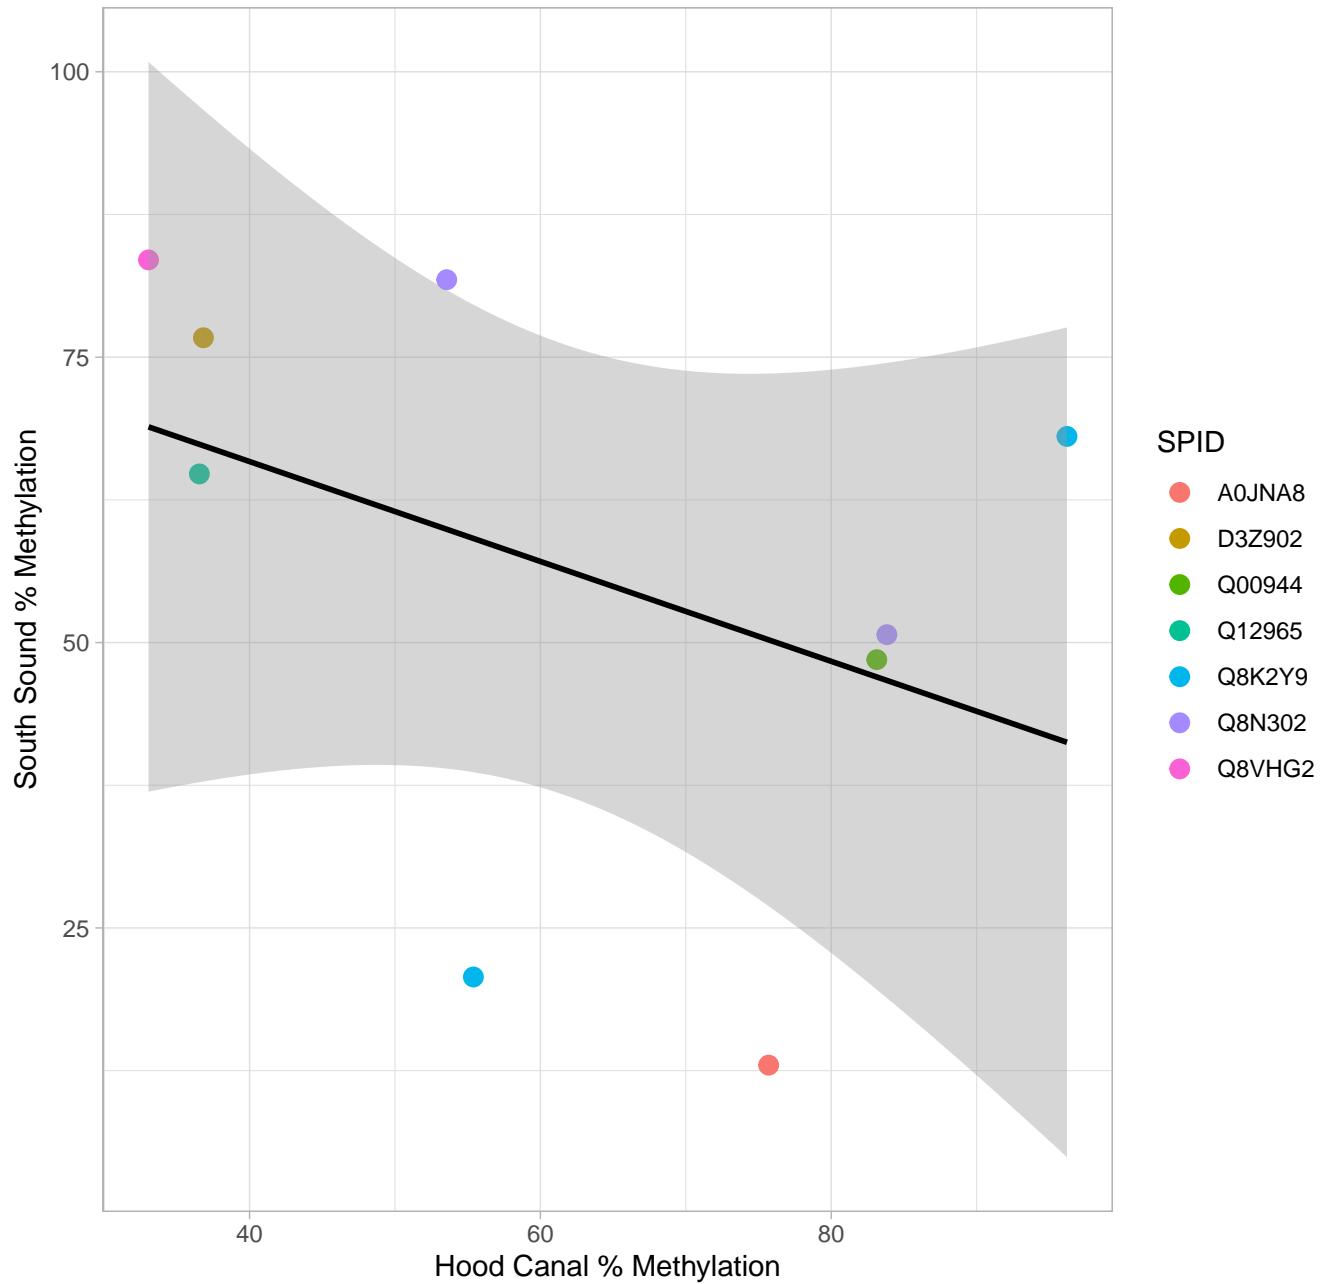

# Enriched Biological Process: cell migration

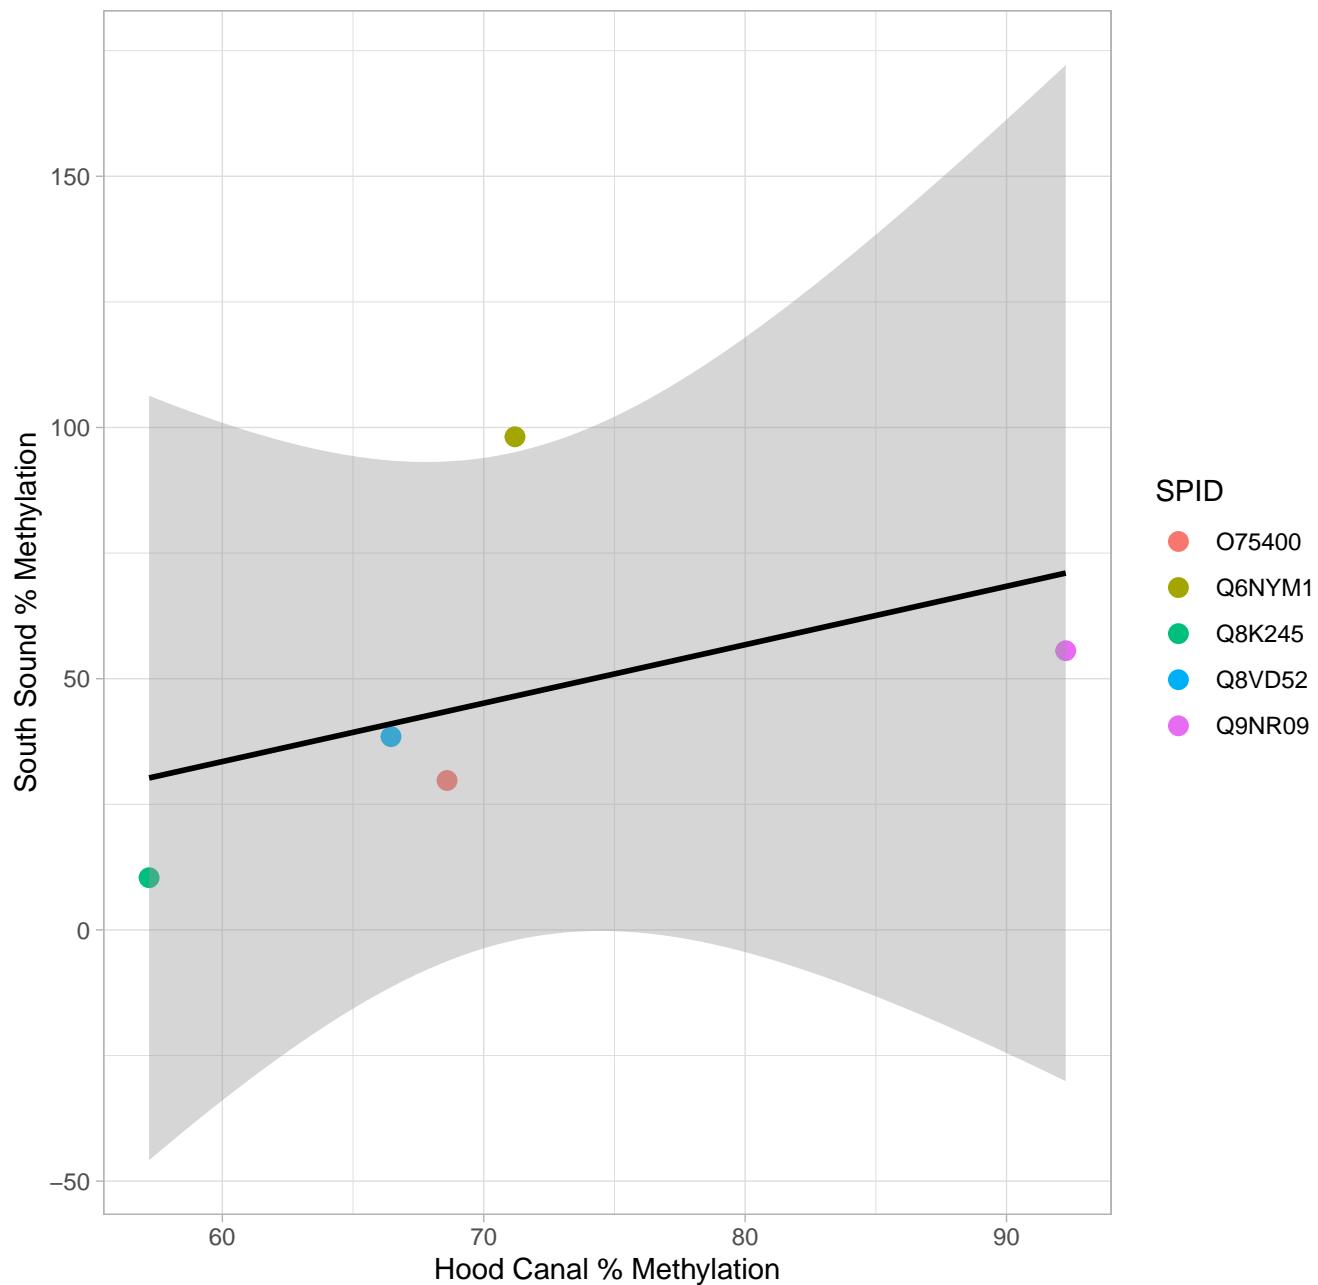

# Enriched Biological Process: cellular iron ion homeostasis

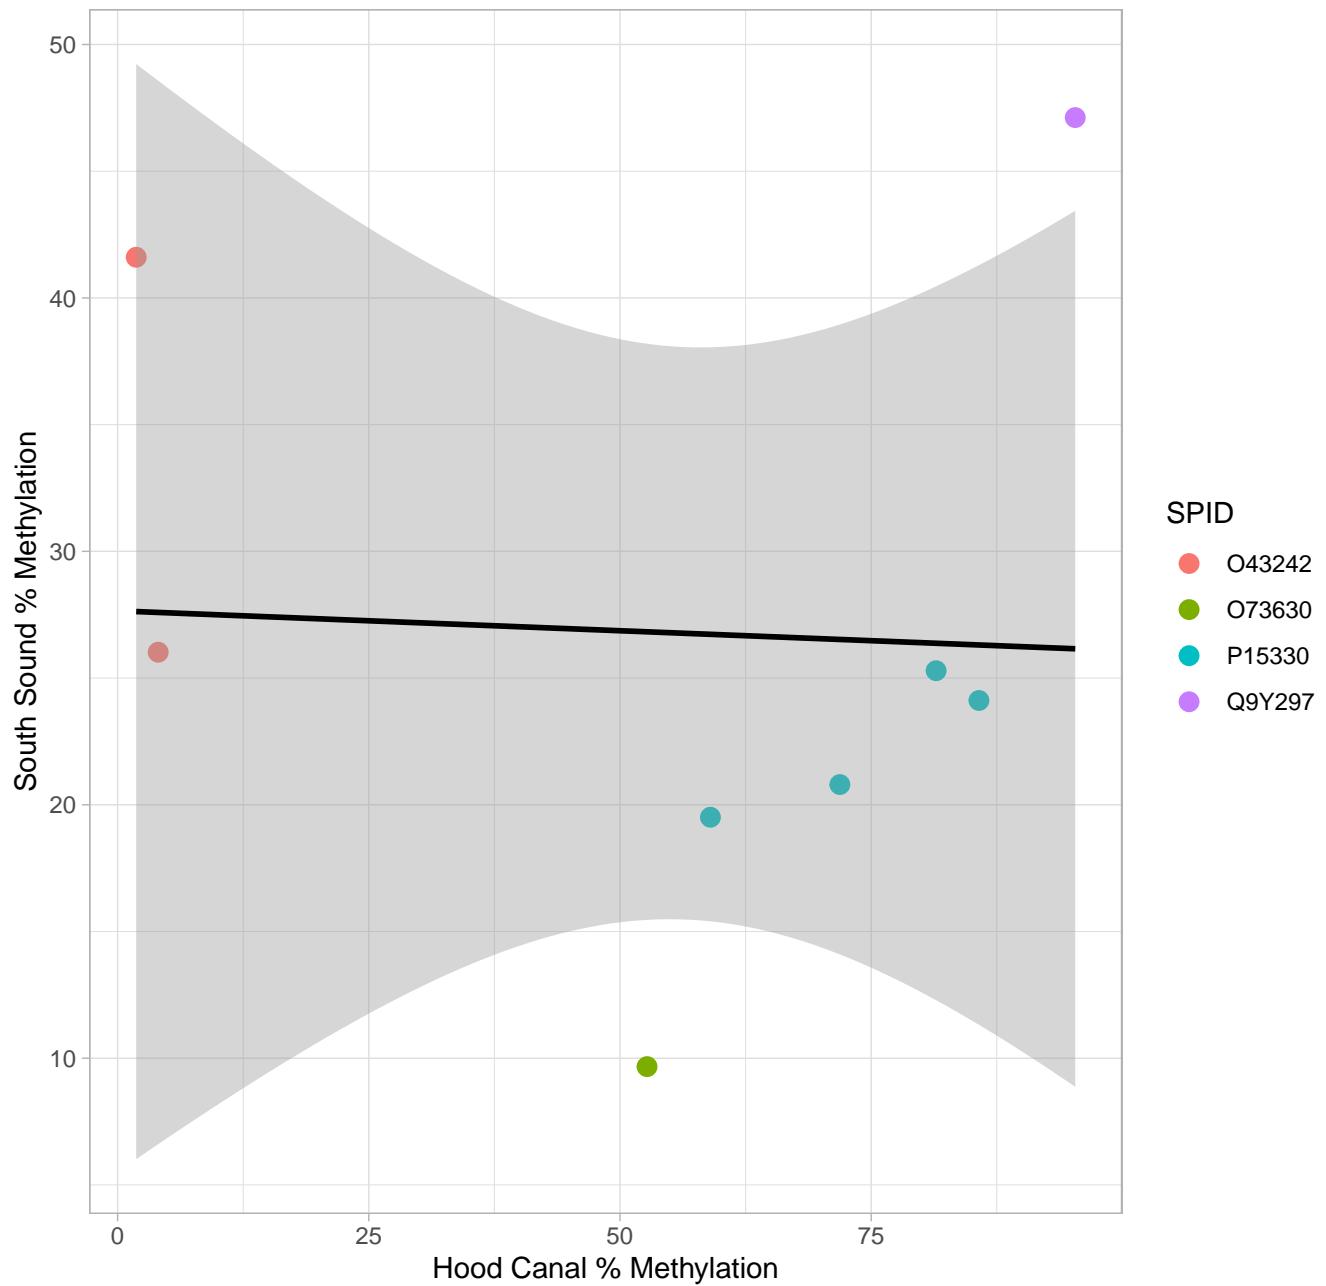

### Enriched Biological Process: vasculogenesis

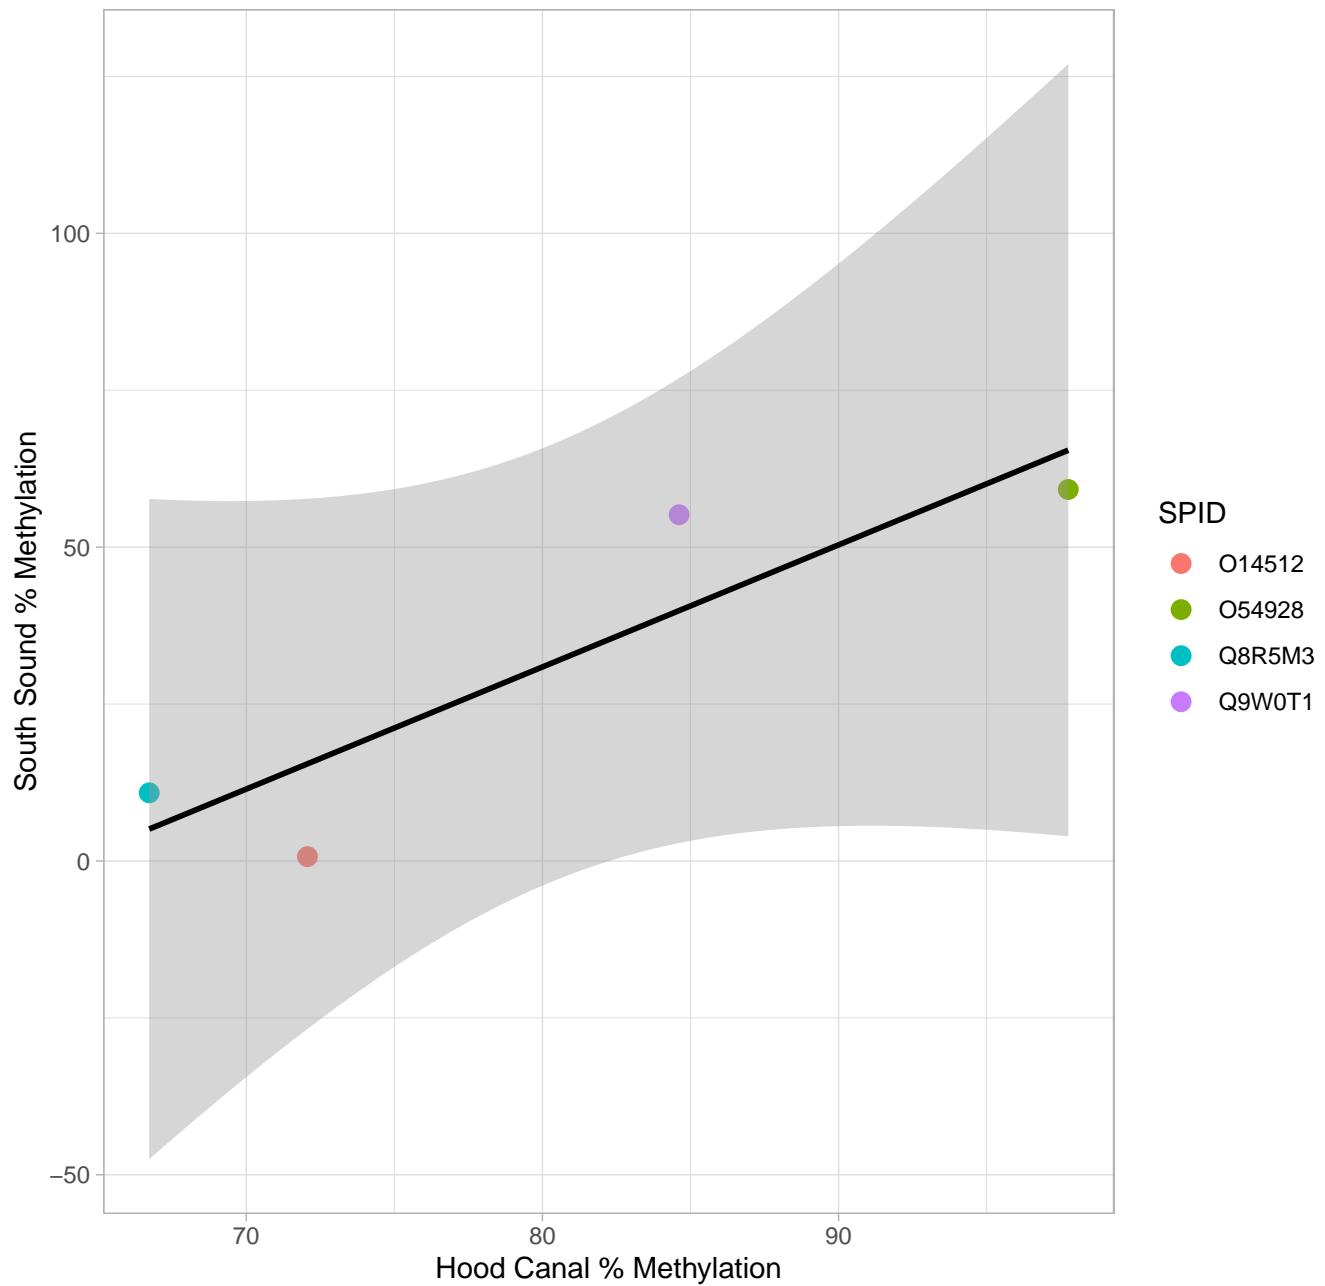

# Enriched Biological Process: regulation of cytokinesis

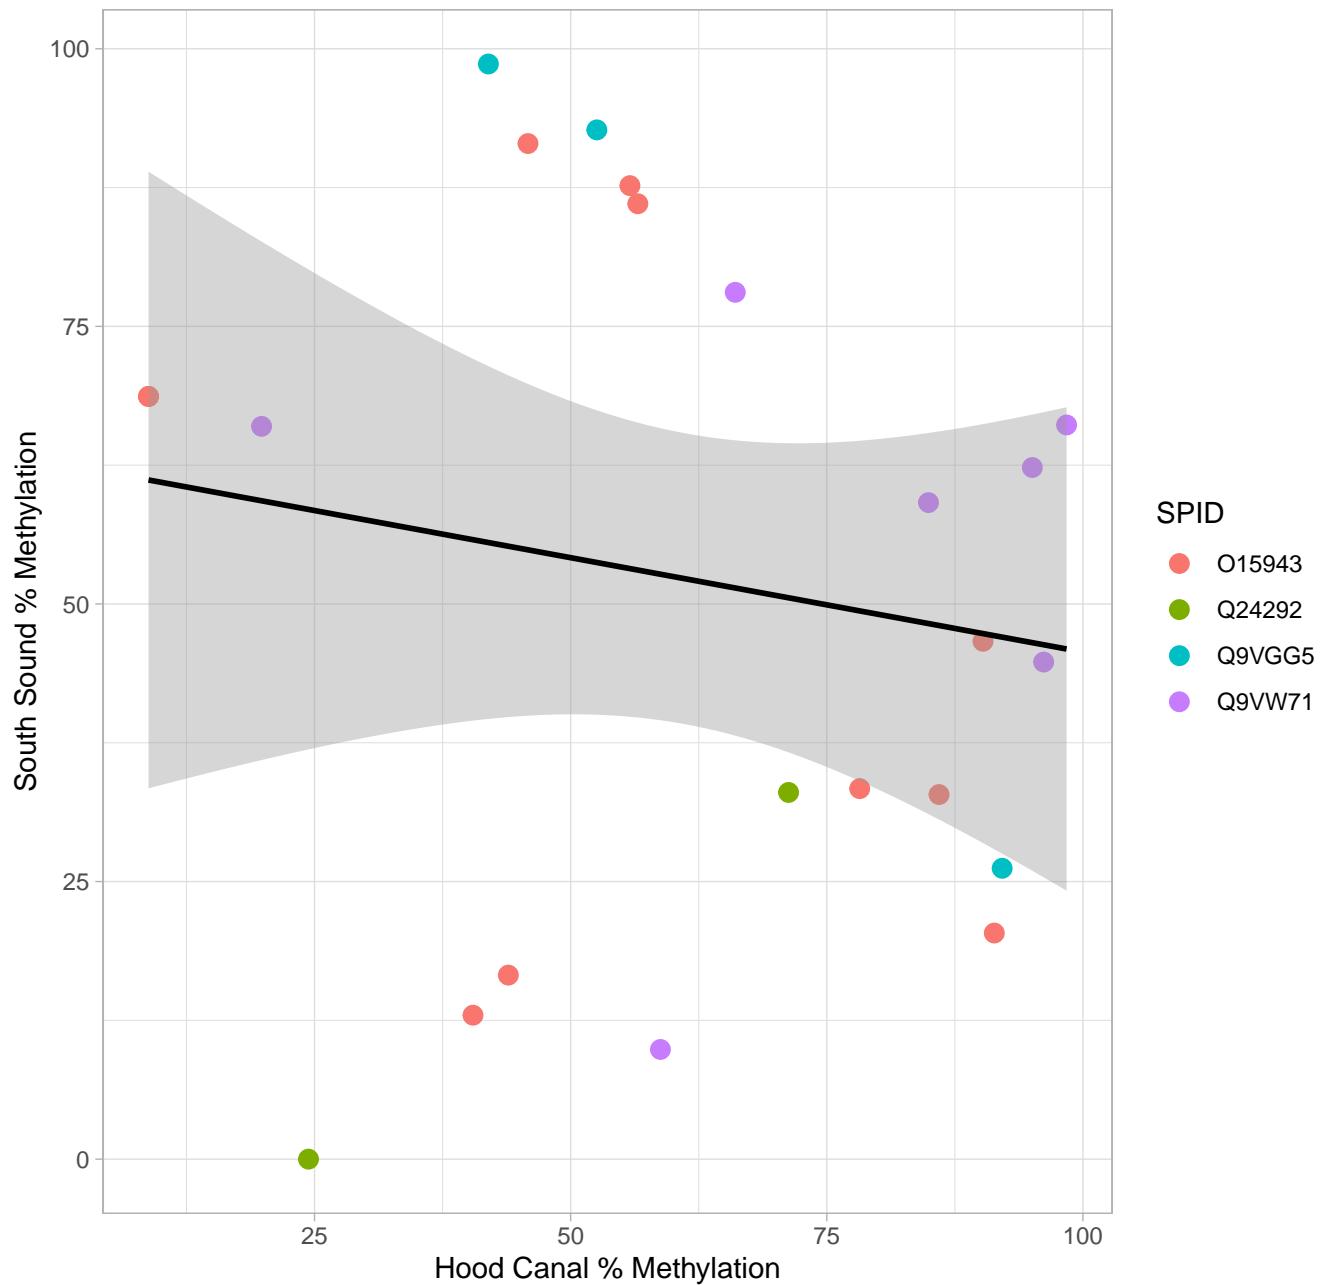

# Enriched Biological Process: NIK/NF-kappaB signaling

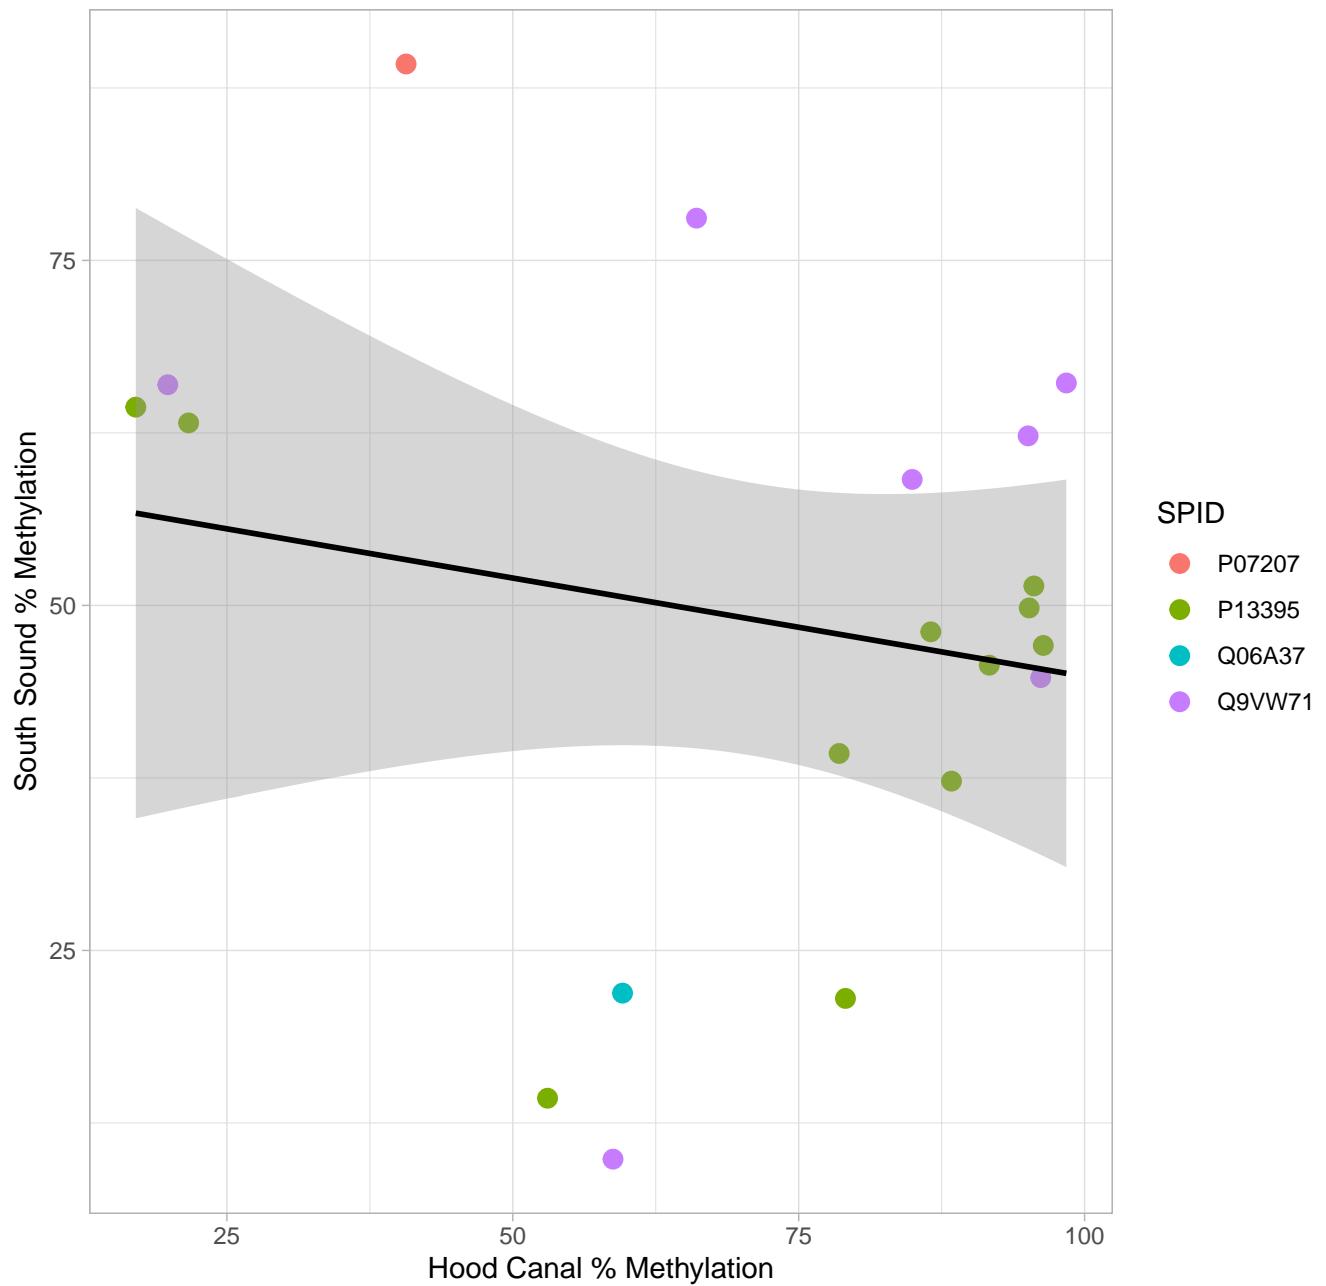

### Enriched Biological Process: negative regulation of JAK–STAT cascade

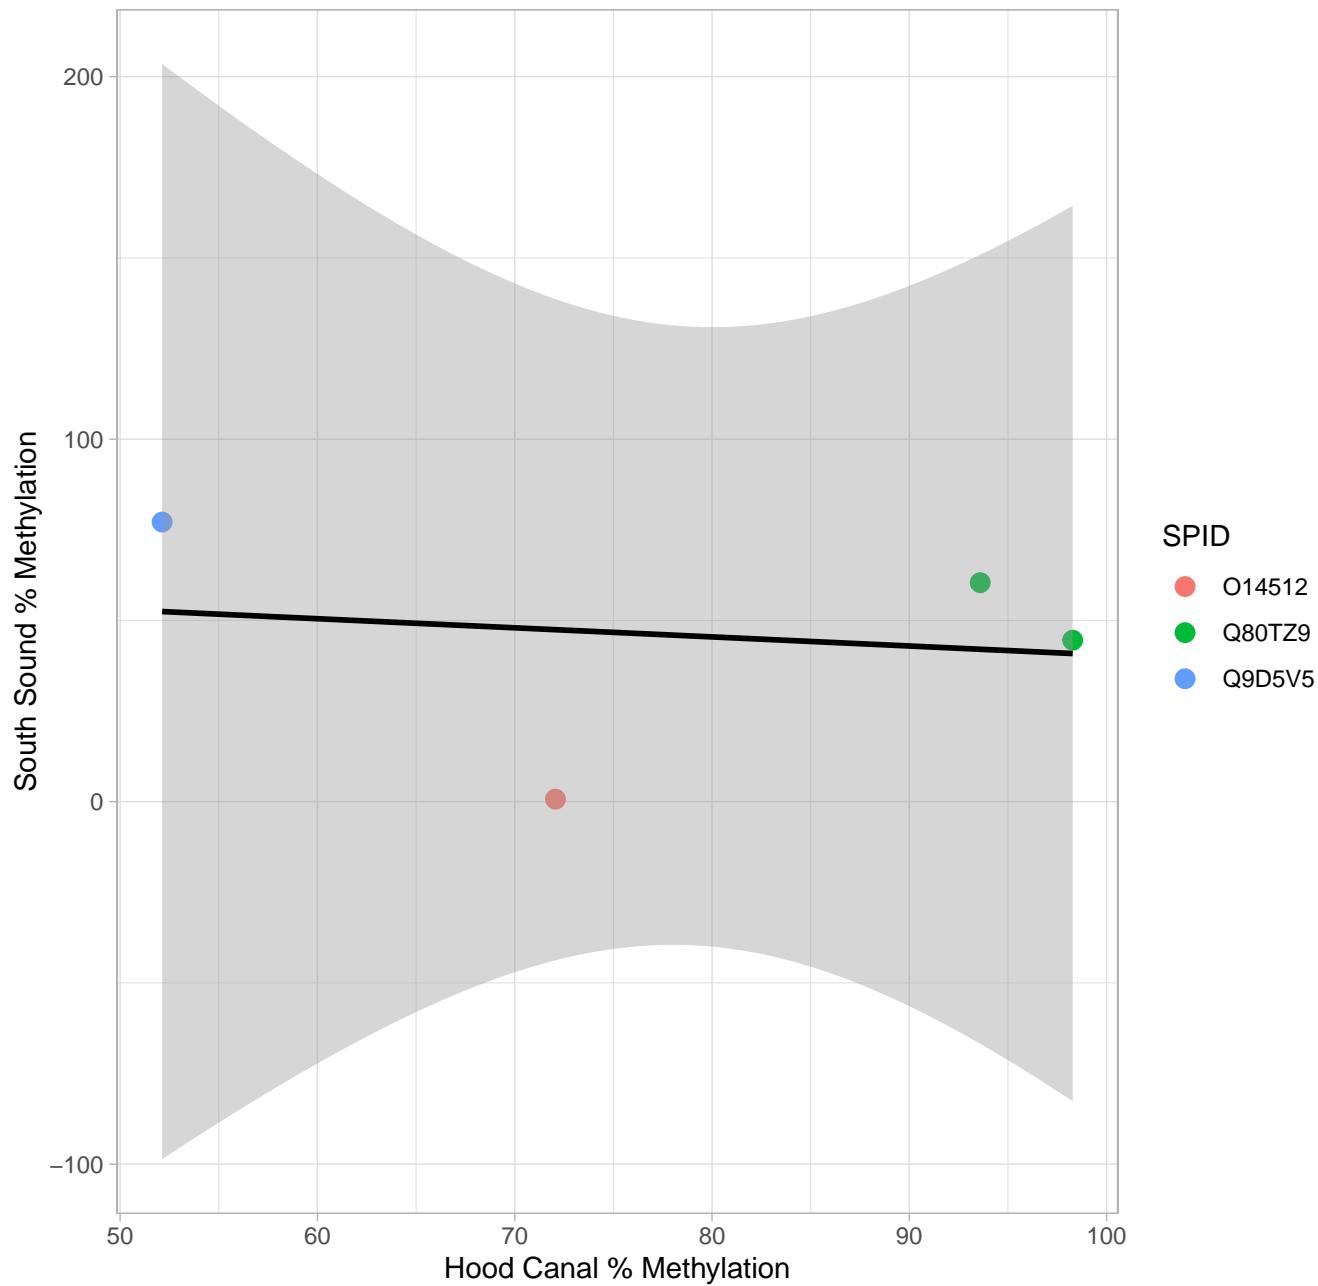

### Enriched Biological Process: cell–cell adhesion mediated by cadherin

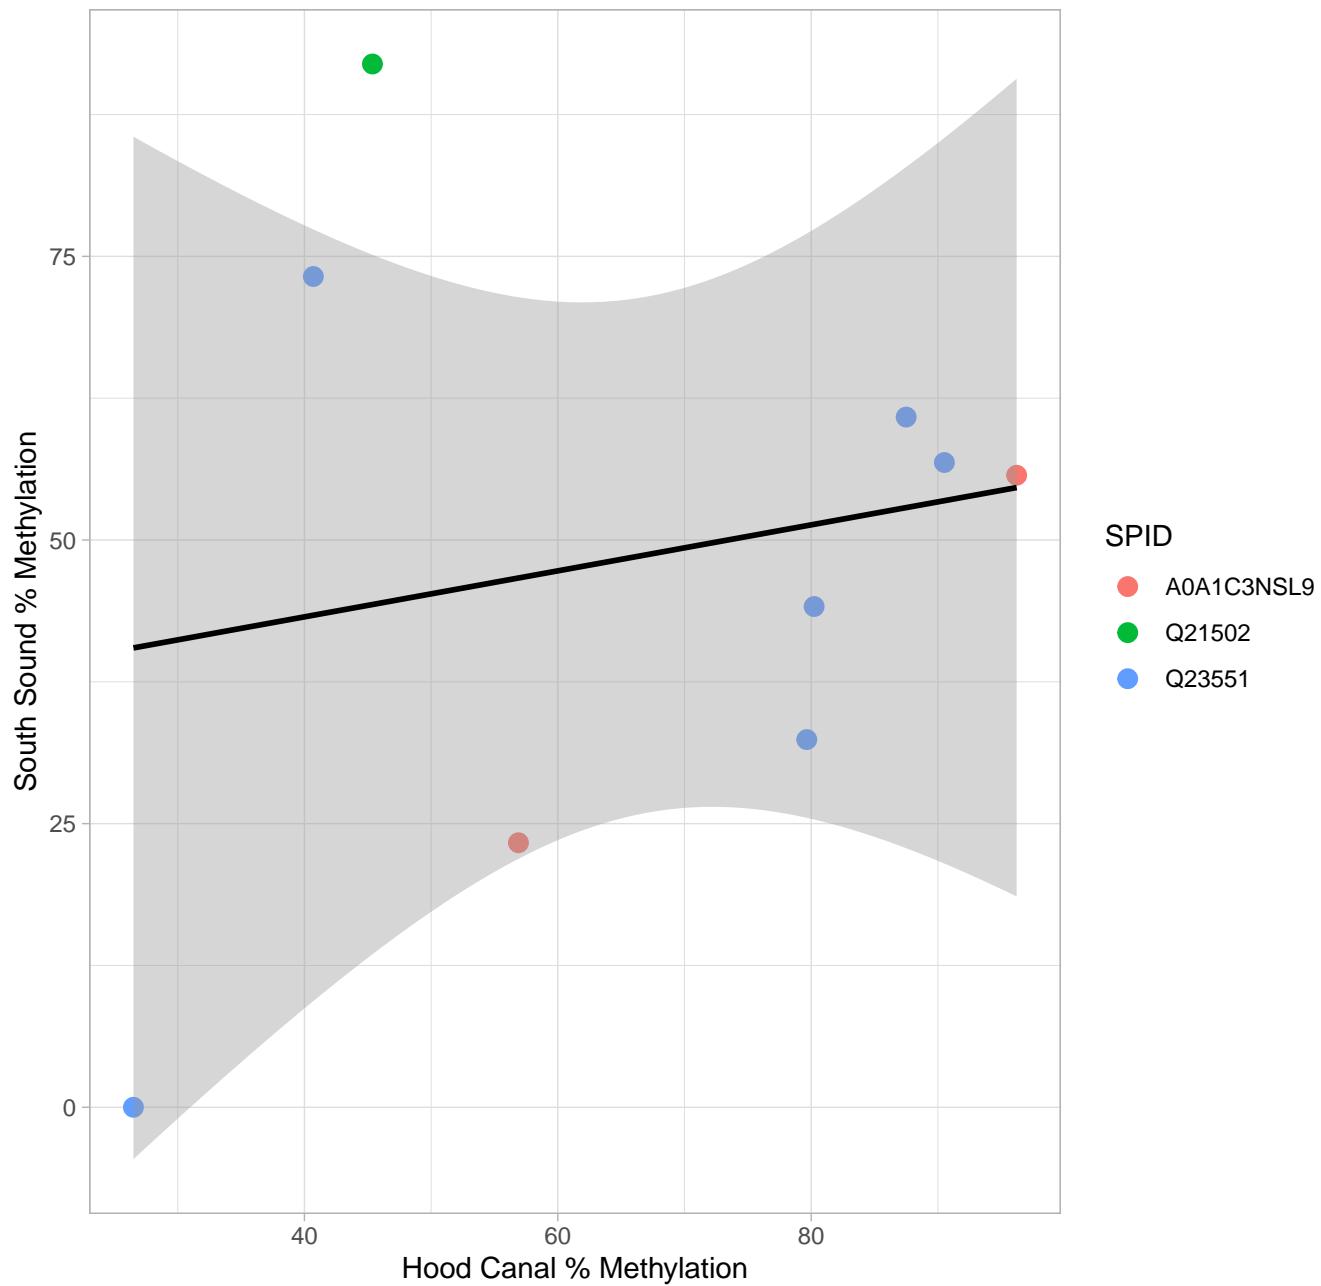

# Enriched Biological Process: epithelium development

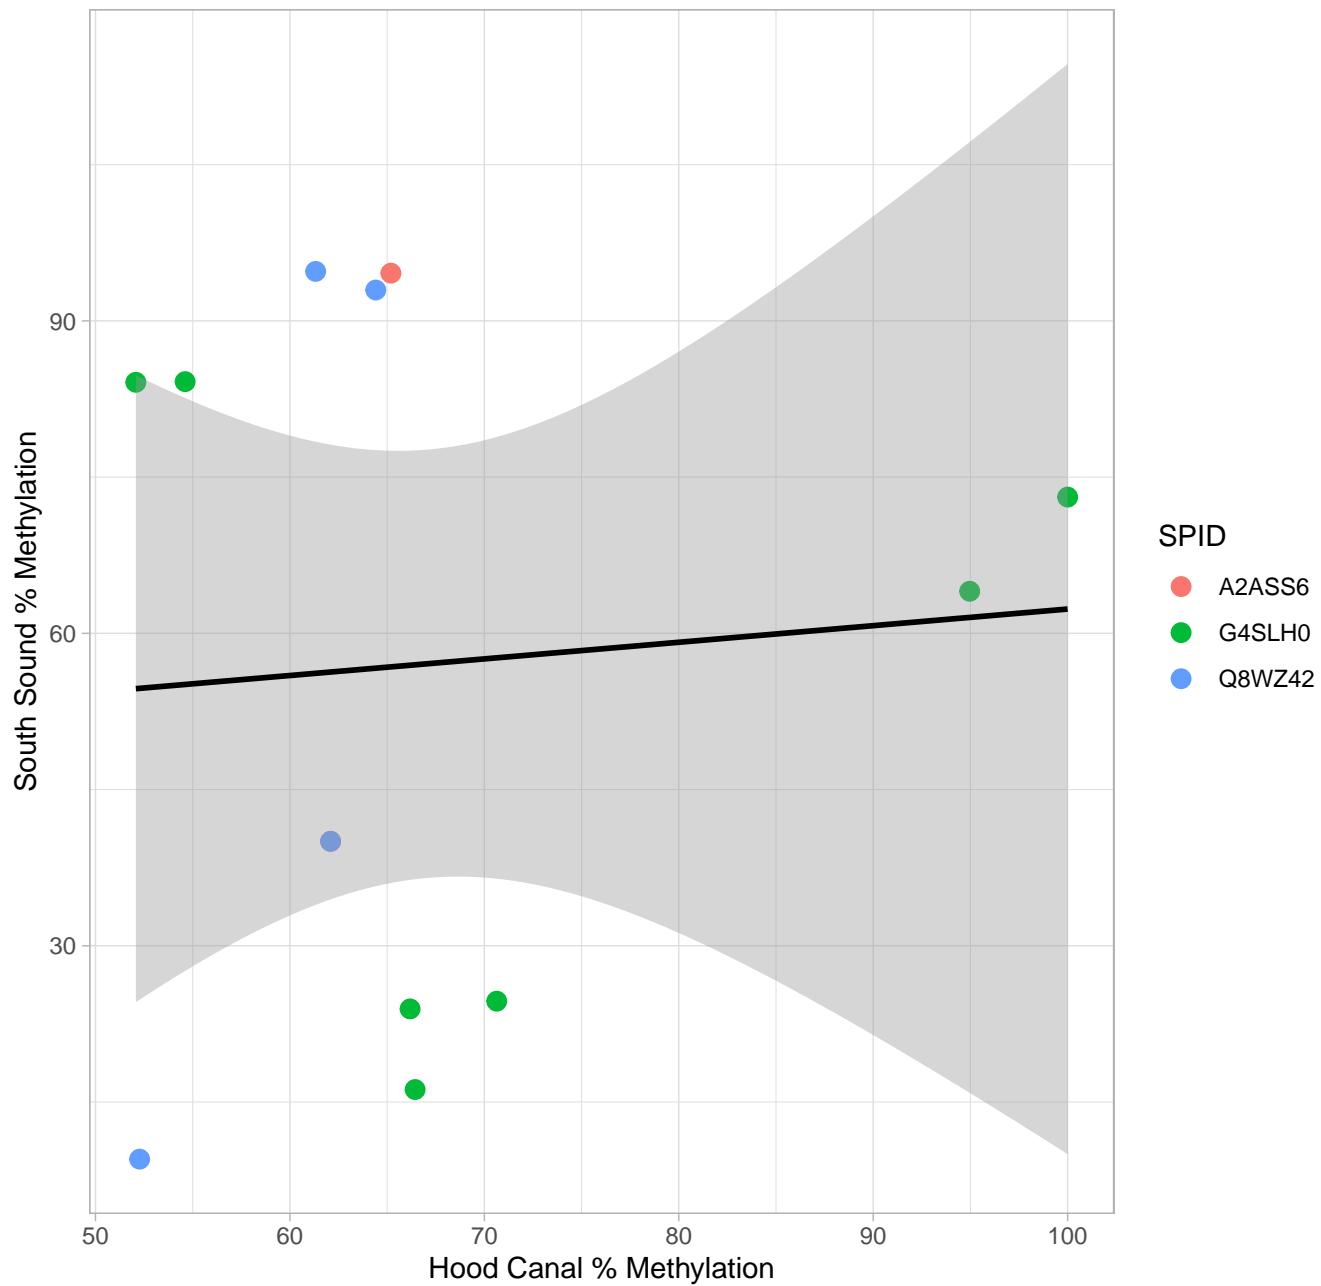

# Enriched Biological Process: radial glia guided migration of Purkinje cell

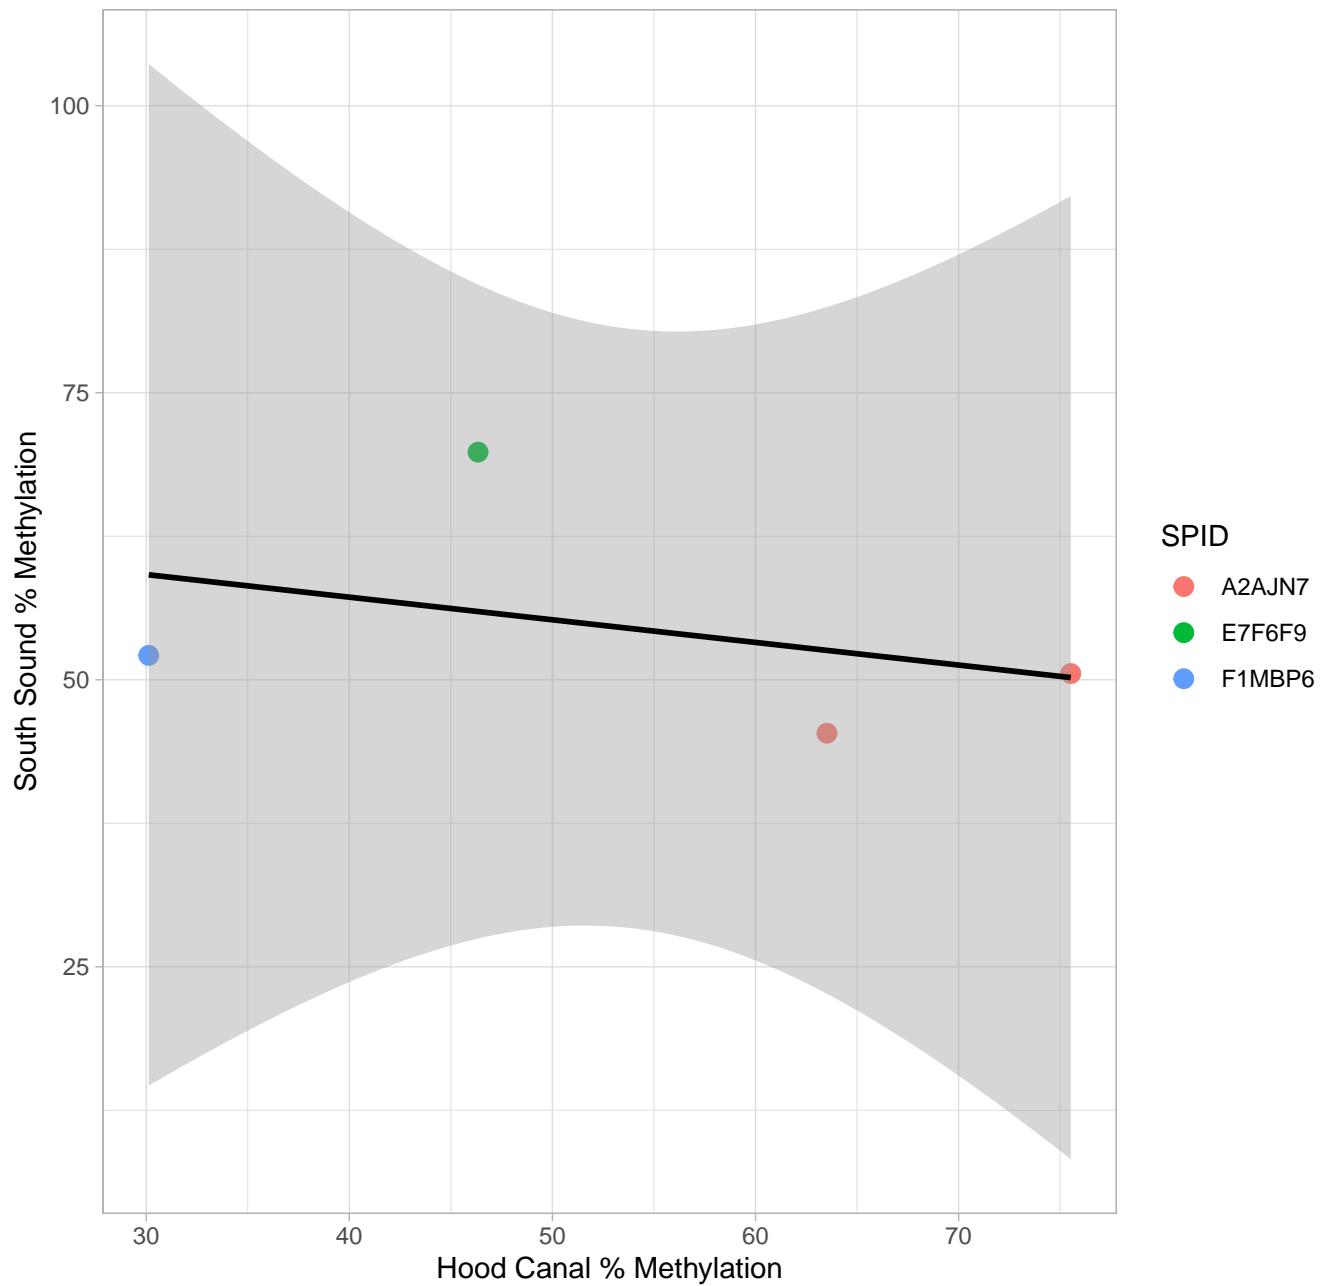

# Enriched Biological Process: negative regulation of vulval development

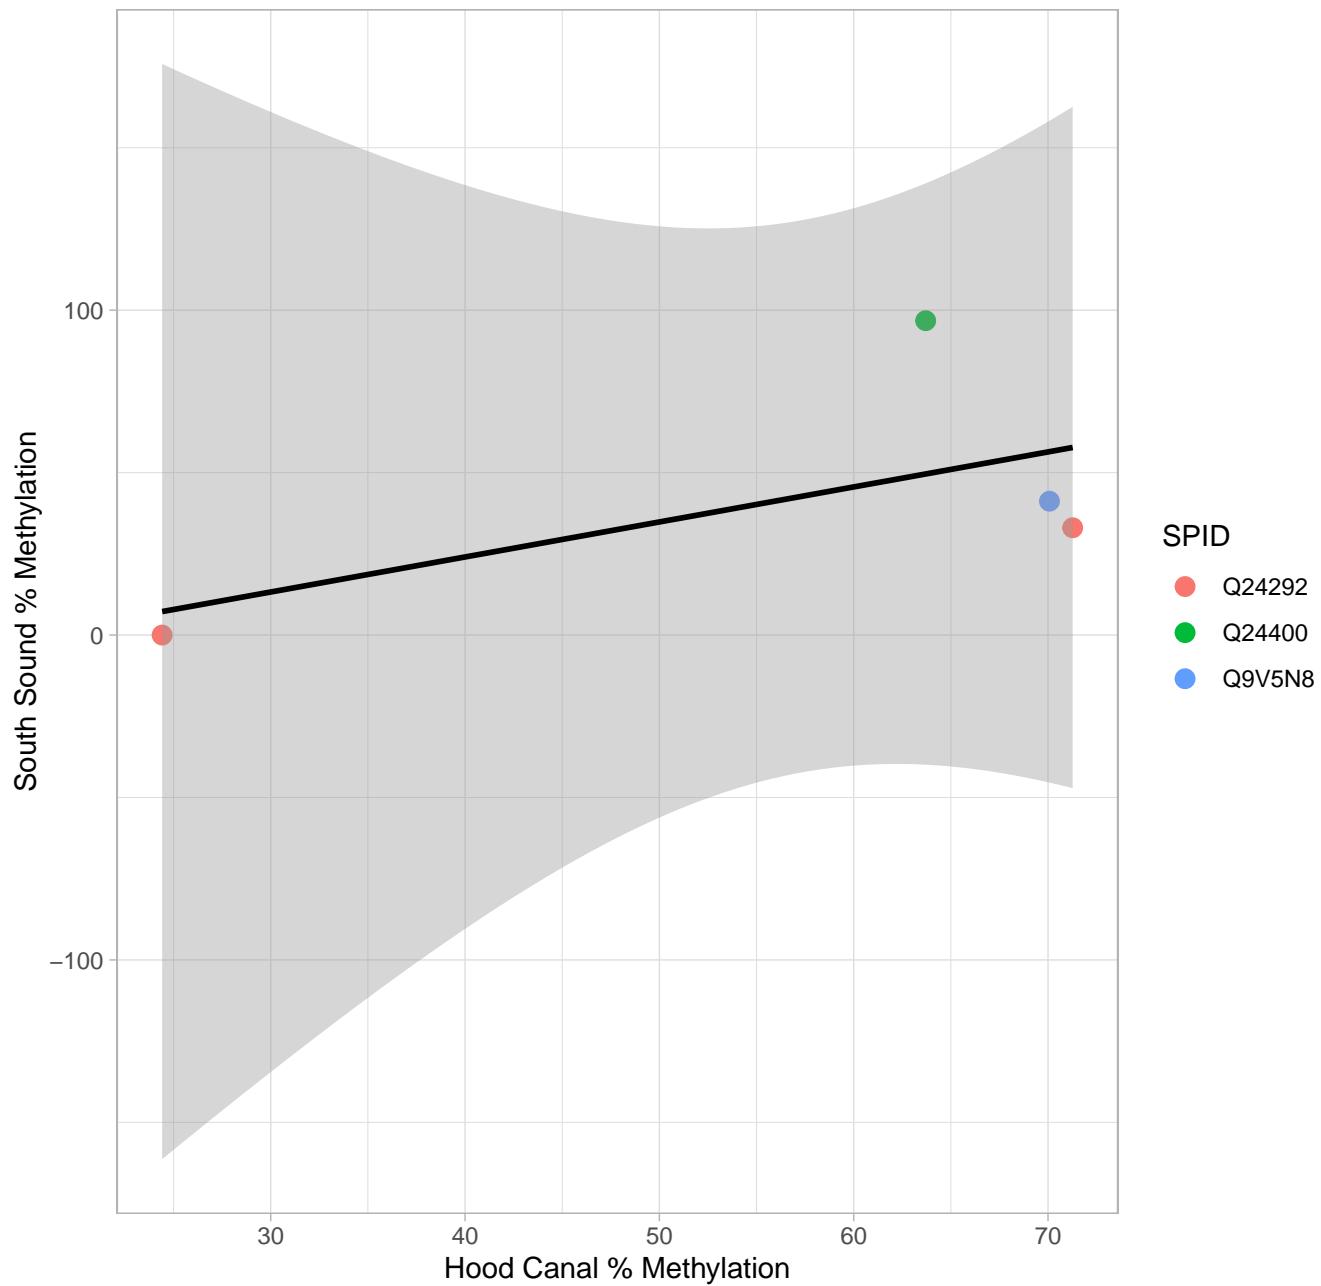

# Enriched Biological Process: striated muscle contraction

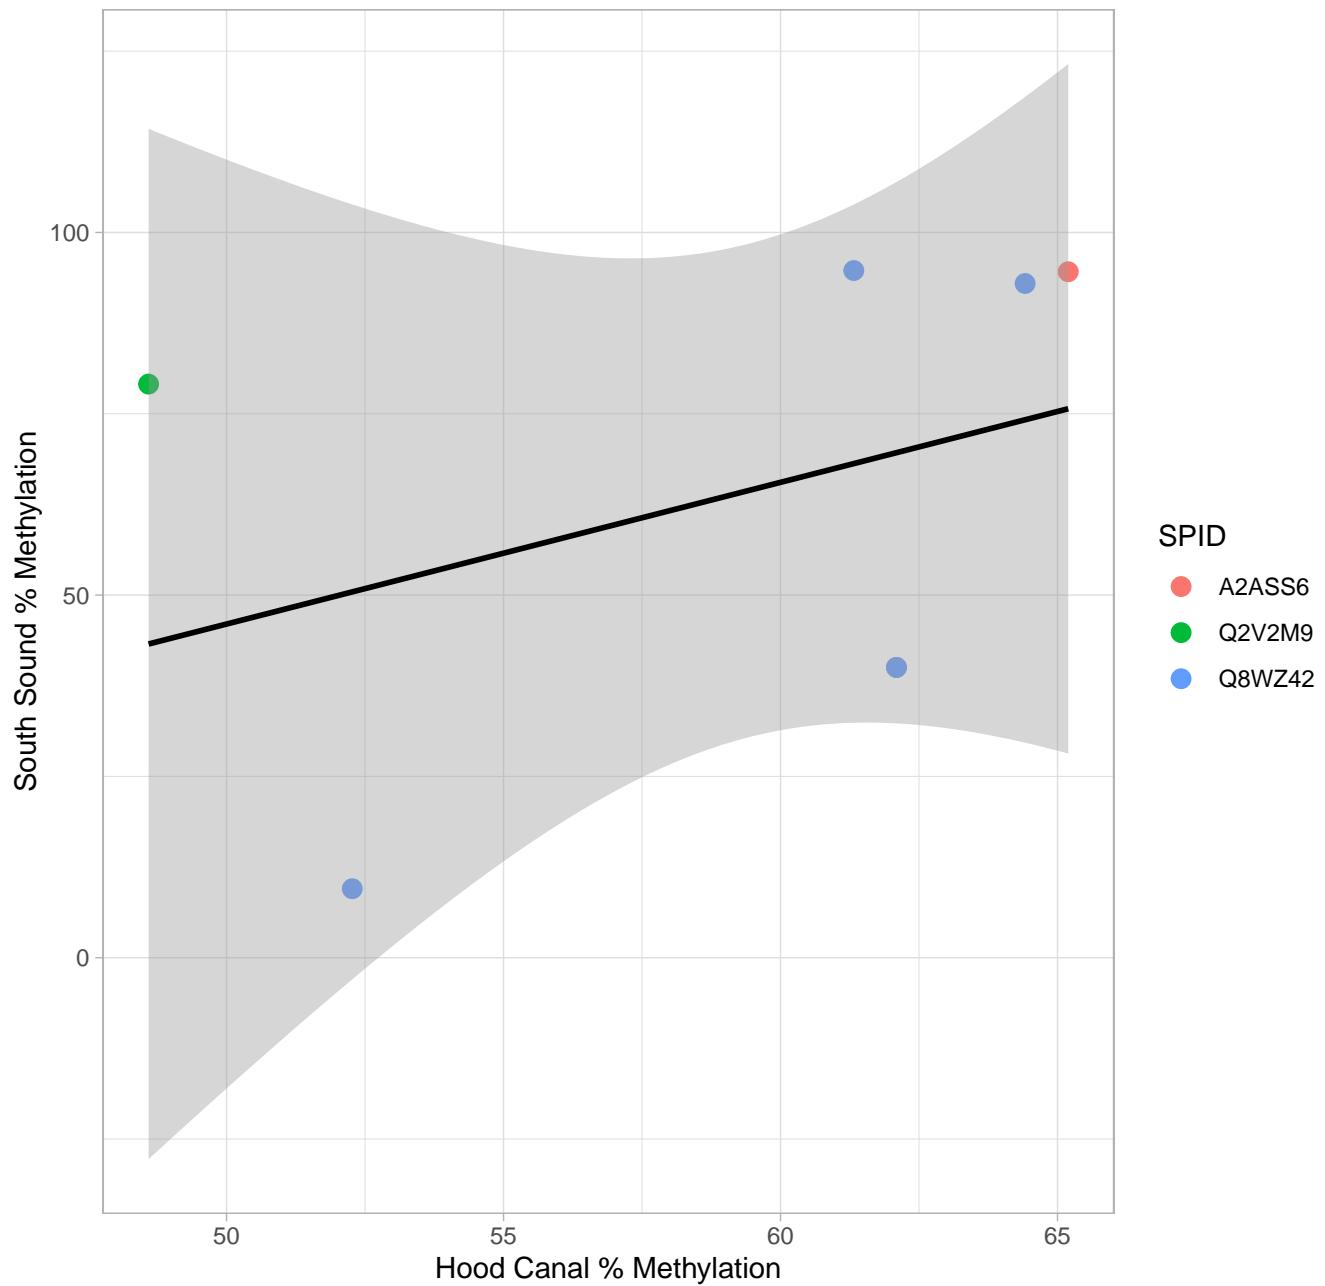

# Enriched Biological Process: ion homeostasis

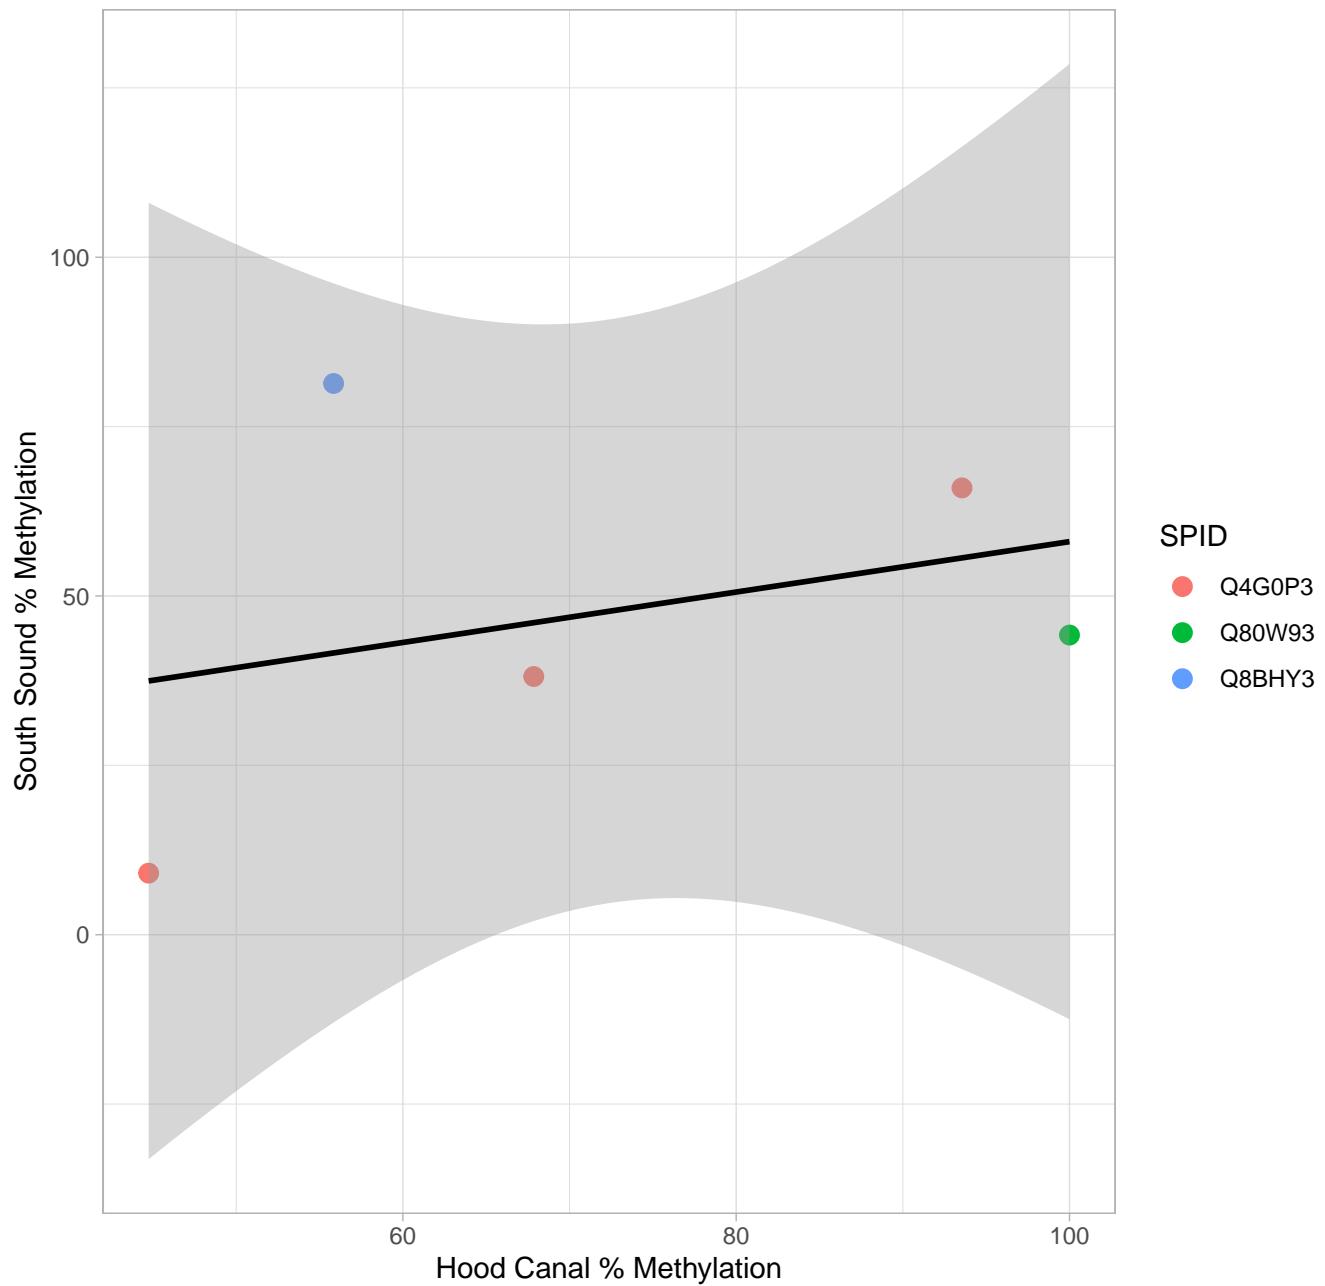

# Enriched Biological Process: regulation of establishment of planar polarity

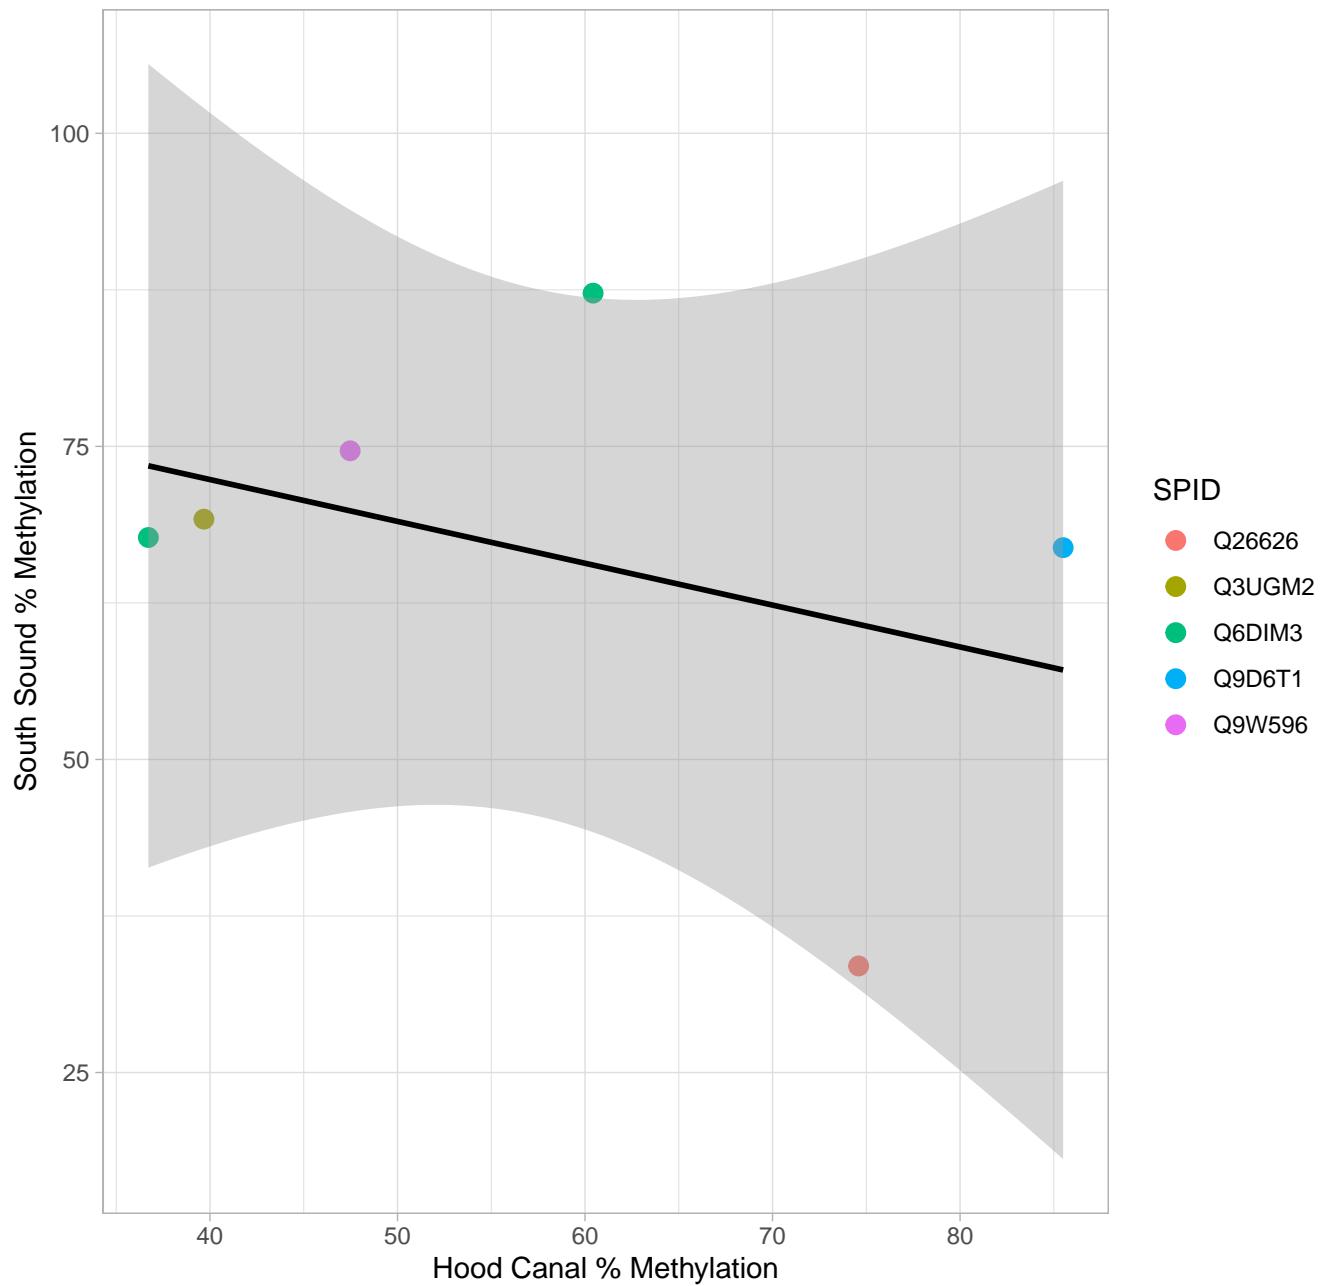

# Enriched Biological Process: cardiac myofibril assembly

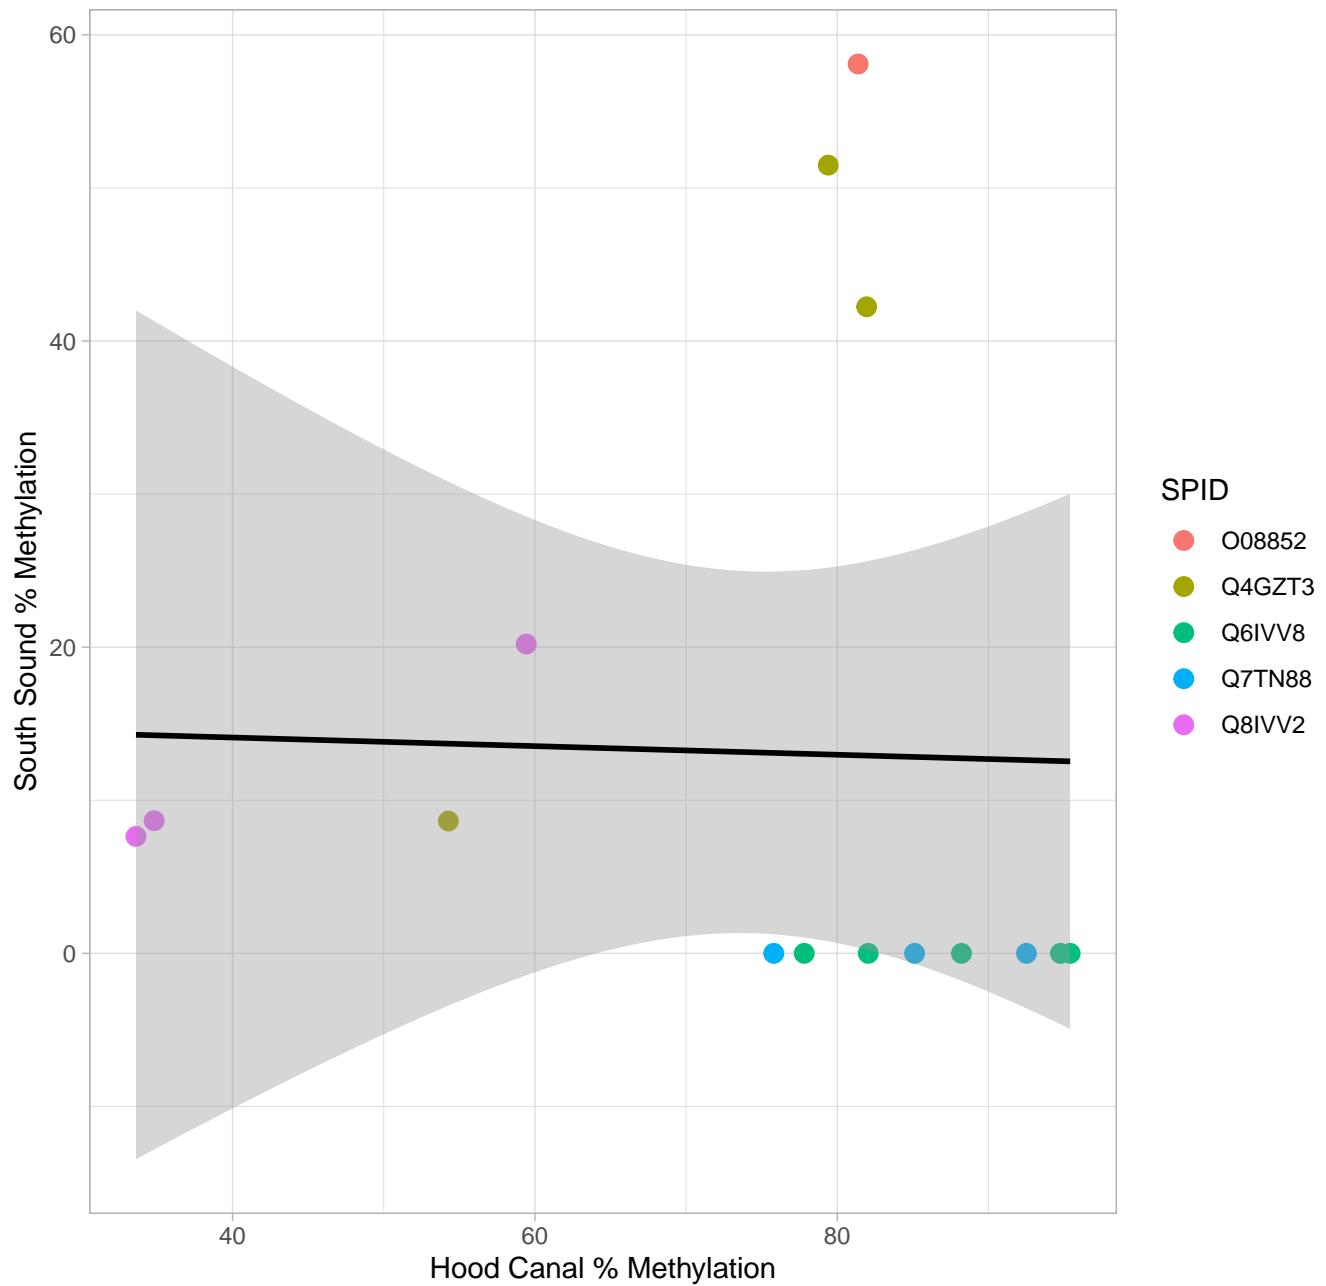

# Enriched Biological Process: trachea development

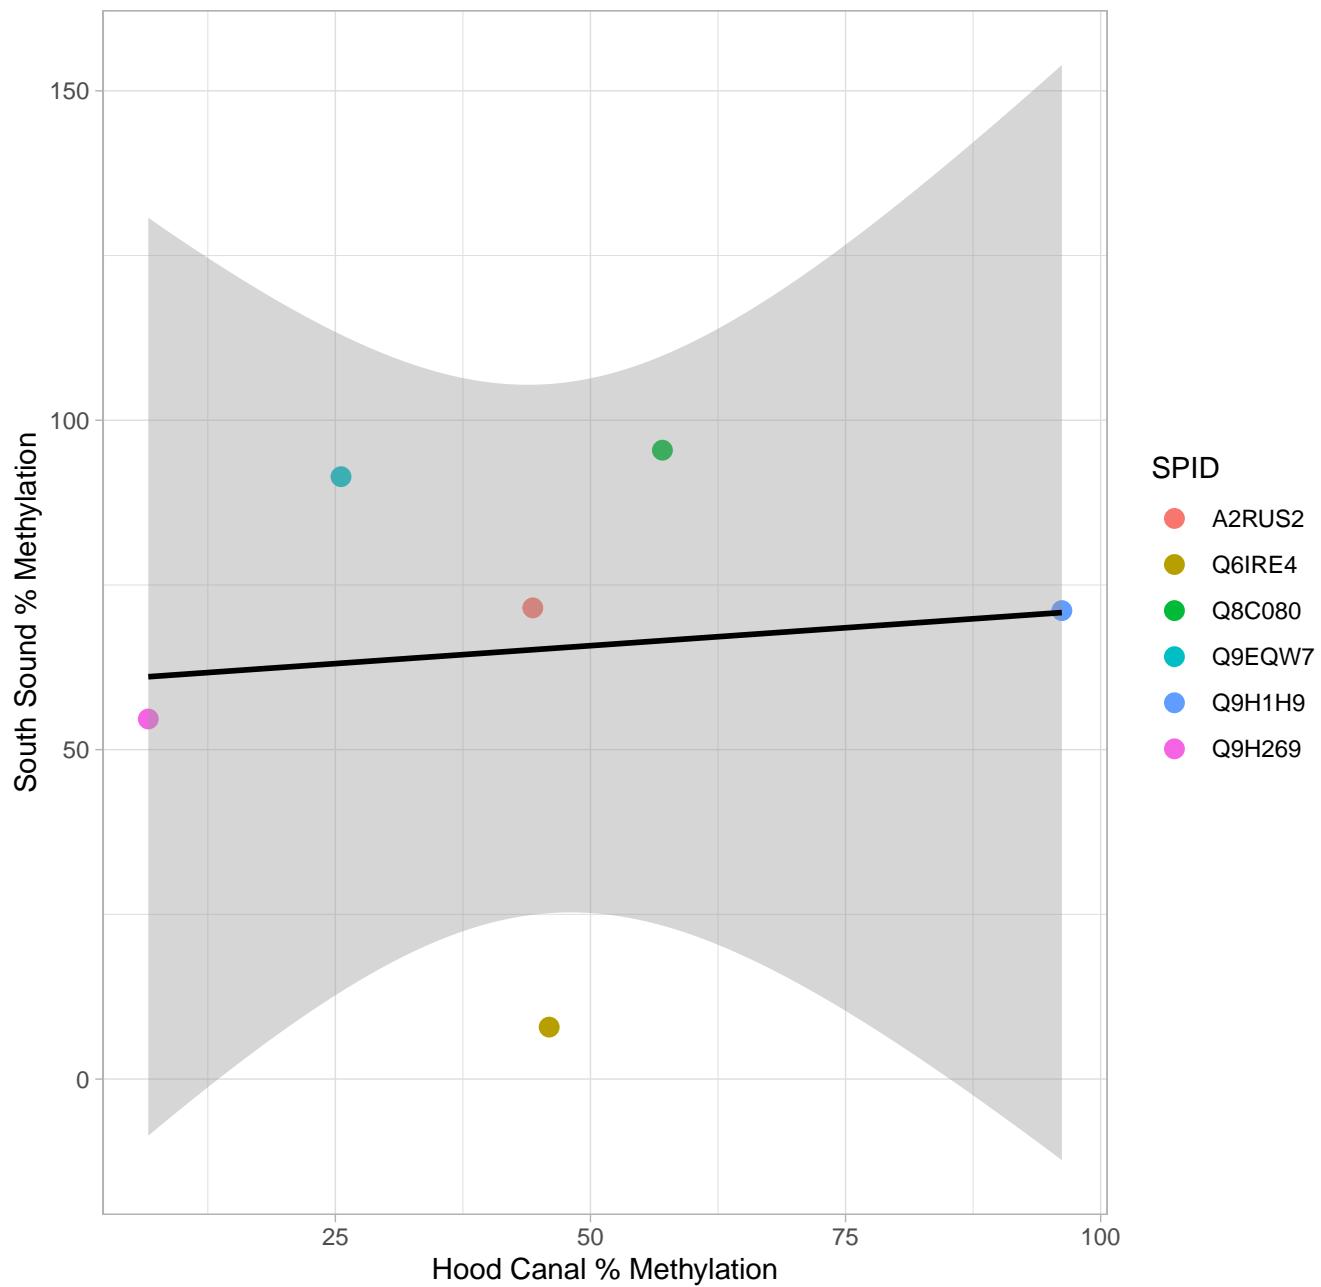

### Enriched Biological Process: microtubule-based process

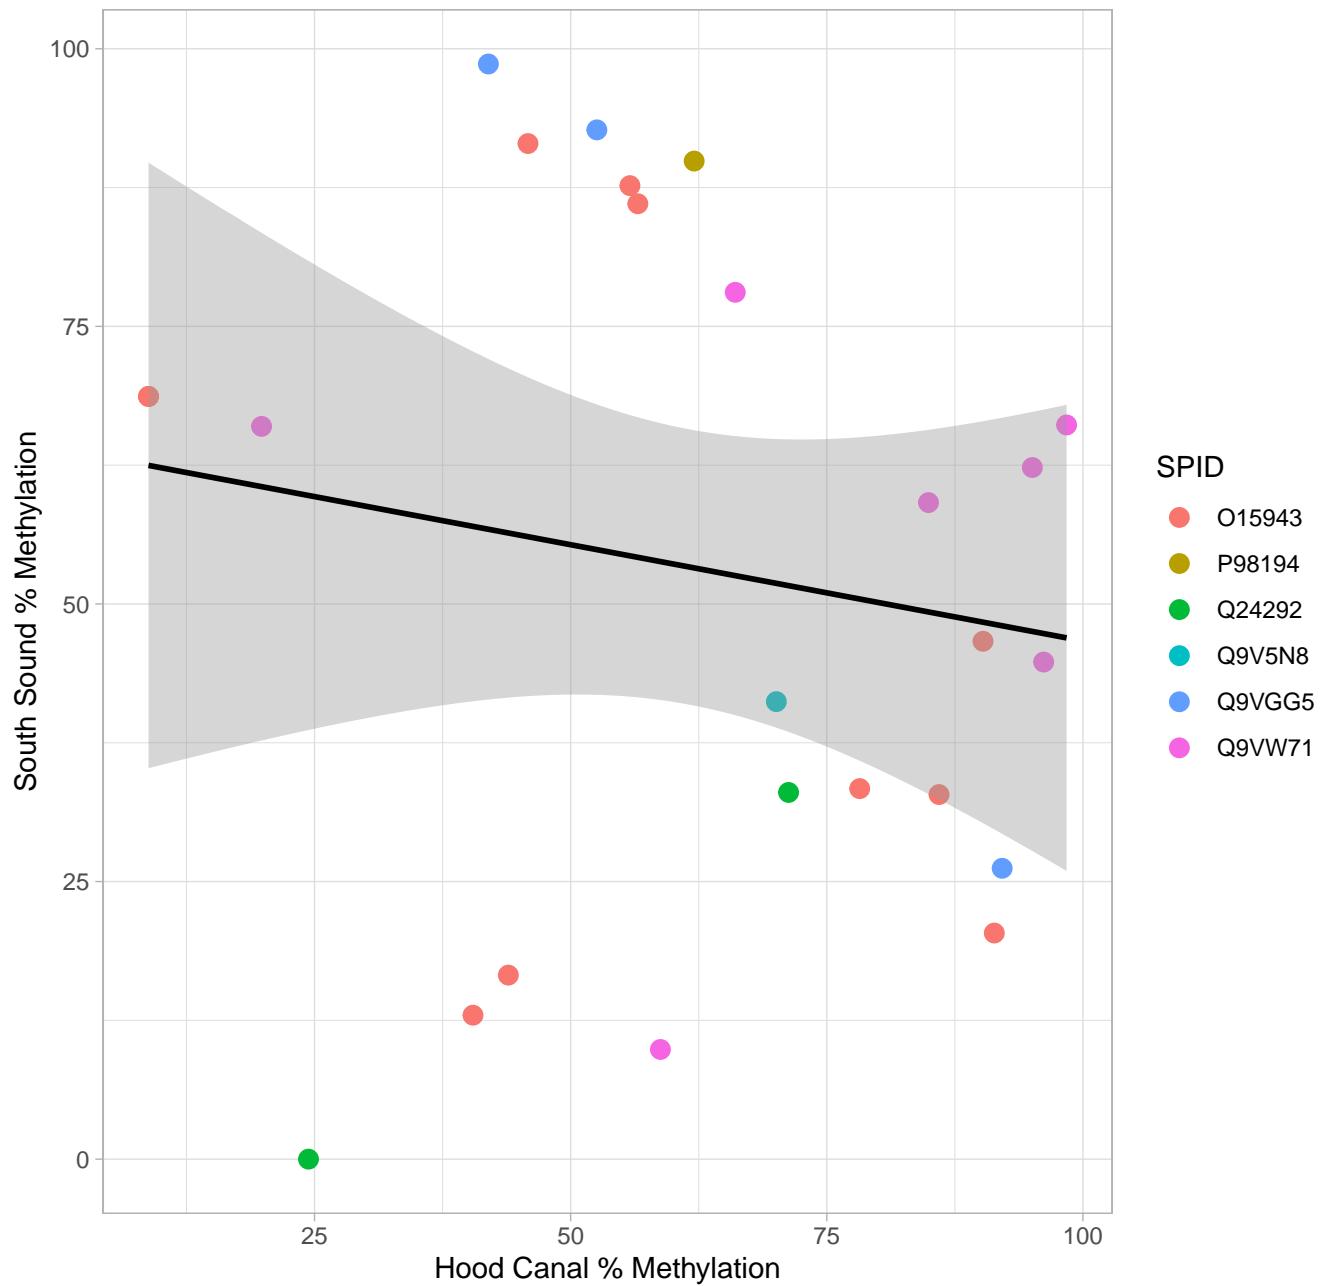

# Enriched Biological Process: detection of mechanical stimulus

### Enriched Biological Process: endosome to lysosome transport

# Enriched Biological Process: calcium-dependent cell-cell adhesion via plasma membrane cell adhesion

# Enriched Biological Process: positive regulation of protein ubiquitination
